Subject: PHASE I ENVIRONMENTAL SITE ASSESSMENT
680 and 700 East McGlincy Lane
680 and 700 East McGlincy Lane, Campbell, California 95008
AEI Project No. 389104

Dear Mr. Brett Henry:

AEI Consultants is pleased to provide the results of the Phase I Environmental Site Assessment (Phase I ESA) report of the above referenced address (the "subject property"). This assessment was authorized and performed in accordance with the scope of services outlined in the contract, the scope and limitations of ASTM Standard Practice E1527-13, the Environmental Protection Agency Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), and the requirements of the lender.

We appreciate the opportunity to provide services to you. If you have any questions concerning this report, or if we can assist you in any other matter, please contact me at (732) 414-2720 or gbelli@aeiconsultants.com.

Sincerely,

Eugene A. Belli, REPA, CHMM
Executive Vice President
AEI Consultants

EXECUTIVE SUMMARY

AEI Consultants (AEI) was retained by Trojan Holding, LLC to conduct a Phase I ESA in conformance with the contract and the scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 680 and 700 East McGlincy Lane, Campbell, Santa Clara County, California. Any exceptions to, or deletions from, this practice are described in Sections 1.4, 1.5, and 1.6 of this report.

PROPERTY DESCRIPTION

PROPERTY INFORMATION	
Street Addresses	680 and 700 East McGlincy Lane

REGULATORY INFORMATION	
Regulatory Database Listings	None identified
Institutional Controls	None identified
Engineering Controls	None identified
Environmental Liens	None identified

Based on a review of historical sources, the subject property was identified to consist of orchard and farming land from the early 1900s to 1978, the current self-storage operation from 1978 to present, and a household recycling depot from 1978 to 2005.

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	E McGlincy Lane followed by: Office building (615 E McGlincy Lane) Auto Repair Shop (625 E McGlincy Lane) Bay Area Rodent Solutions (645 E McGlincy Lane) Sterling Marble & Granite (655 E McGlincy Lane) Caliber Collision (665 E McGlincy Lane) Lambert & Sons Floor Covering (695 E McGlincy Lane)	665: RCRA-SQG, CUPA, EMI 615: LUST, HIST LUST, CUPA, HIST CORTESE 625: DRYCELANERS, EDR Hist Cleaner, CUPA 655, 695: CUPA 645: CUPA, PEST LIC
East	Multi-tenant commercial/industrial building (710 E McGlincy Lane)	CUPA
South	Residences (663-675 Regas Drive)	None identified
West	West Valley Construction (580 E McGlincy Lane)	RCRA-SQG, LUST (3), HIST LUST, UST (2), SWEEPS UST, HIST UST (2), CA FID UST, CUPA, HIST CORTESE, FINDS, ECHO, HAZNET

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

Based upon topographic map interpretation, the direction of groundwater flow beneath the subject property is inferred to be to the east. Based on groundwater monitoring data for the adjacent site at 615 McGlincy Lane, obtained from GeoTracker, groundwater is presumed to be present at an estimated depth of 7 to 54 feet bgs.

CONCLUSIONS

AEI has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of 680 and 700 East McGlincy Lane, Campbell, Santa Clara County, California, the Property. Any exceptions to or deletions from this practice are described in Section 1.5 of this report. This assessment has revealed no evidence of Recognized Environmental Conditions (RECs) or Controlled Recognized Environmental Conditions (CRECs) in connection with the subject property.

AEI's assessment included an evaluation of other Environmental Conditions including, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of asbestos-containing materials, radon, lead-based paint, wetlands and mold and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no evidence of related conditions of concern in connection with the subject property.

RECOMMENDATIONS

As a result of this assessment, AEI does not recommend further investigation of the subject property at this time.

1.0 INTRODUCTION

This report documents the methods and findings of the Phase I ESA performed in conformance with the contract and scope and limitations of ASTM Standard Practice E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) for the property located at 680 and 700 East McGlincy Lane, Campbell, Santa Clara County, California (Appendix A: Figures and Appendix B: Property Photographs).

1.1 SCOPE OF WORK

The purpose of the Phase I ESA is to assist the client in identifying potential RECs, in accordance with ASTM E1527-13, associated with the presence of any hazardous substances or petroleum products, their use, storage, and disposal at and in the vicinity of the subject property. Property assessment activities focused on: 1) a review of federal, state, tribal and local databases that identify and describe underground fuel tank sites, leaking underground fuel tank sites, hazardous waste generation sites, and hazardous waste storage and disposal facility sites within the ASTM approximate minimum search distance; 2) a property and surrounding site reconnaissance, and interviews with the past and present owners and current occupants and operators to identify potential environmental contamination; and 3) a review of historical sources to help ascertain previous land use at the site and in the surrounding area.

The goal of AEI Consultants in conducting the environmental site assessment was to identify the presence or likely presence of any hazardous substances or petroleum products on the subject property that may indicate an existing release, a past release, or a material threat of a release of any hazardous substance or petroleum product into the soil, groundwater, or surface water of the subject property. If such conditions were identified, they would be characterized as one of the following:

Recognized Environmental Condition (REC) - is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

Historical Recognized Environmental Condition (HREC) - A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

Controlled Recognized Environmental Condition (CREC) - A past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

De minimis Conditions - Are conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis

are not recognized environmental conditions nor controlled recognized environmental conditions.

Other Environmental Considerations - These include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

1.2 ADDITIONAL SERVICES

Other Environmental Considerations such as ACMs, LBP, lead in drinking water, radon, mold, and wetlands can result in business environmental risks for property owners which may disrupt current or planned operations or cash flow and are generally beyond the scope of a Phase I assessment as defined by ASTM E1527-13. Based upon the agreed-on scope of services this ESA did not include subsurface or other invasive assessments, business environmental risks, or other services not specifically identified and discussed herein.

1.3 SIGNIFICANT ASSUMPTIONS

The following assumptions are made by AEI in this report. AEI relied on information derived from secondary sources including governmental agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, and personal interviews. AEI has reviewed and evaluated the thoroughness and reliability of the information derived from secondary sources including government agencies, the client, designated representatives of the client, property contact, property owner, property owner representatives, computer databases, or personal interviews. It appears that all information obtained from outside sources and reviewed for this assessment is thorough and reliable. However, AEI cannot guarantee the thoroughness or reliability of this information.

Groundwater flow, unless otherwise specified by on-site well data or well data from the subject property or nearby sites, is inferred from contour information depicted on the USGS topographic maps. AEI assumes the subject property has been correctly and accurately identified by the client, designated representative of the client, property contact, property owner, and property owner's representatives.

1.4 LIMITATIONS

Property conditions, as well as local, state, tribal, and federal regulations can change significantly over time. Therefore, the recommendations and conclusions presented as a result of this assessment apply strictly to the environmental regulations and property conditions existing at the time the assessment was performed. Available information has been analyzed using currently accepted assessment techniques and it is believed that the inferences made are reasonably representative of the property. AEI makes no warranty, expressed or implied, except that the services have been performed in accordance with generally accepted environmental property assessment practices applicable at the time and location of the assessment.

Considerations identified by ASTM as beyond the scope of a Phase I ESA that may affect business environmental risk at a given property include the following: ACMs, radon, LBP, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, mold, and high

voltage lines. These environmental issues or conditions may warrant assessment based on the type of the property transaction; however, they are considered non-scope issues under ASTM Standard Practice E1527-13.

If requested by the client, these non-scope issues are discussed herein. Otherwise, the purpose of this assessment is solely to satisfy one of the requirements for qualification of the innocent landowner defense, contiguous property owner or bona fide prospective purchaser under CERCLA. ASTM Standard Practice E1527-13 and the United States EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312) constitute the "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in:

1. 42 U.S.C. § 9601(35)(B), referenced in the ASTM Standard Practice E1527-13.
2. Sections 101(35)(B) (ii) and (iii) of CERCLA and referenced in the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312).
3. 42 U.S.C. § 9601(40) and 42 U.S.C. § 9607(q).

The Phase I ESA is not, and should not be construed as, a warranty or guarantee about the presence or absence of environmental contaminants that may affect the property. Neither is the assessment intended to assure clear title to the property in question. The sole purpose of assessment into property title records is to ascertain a historical basis of prior land use. All findings, conclusions, and recommendations stated in this report are based upon facts, circumstances, and industry-accepted procedures for such services as they existed at the time this report was prepared (i.e., federal, state, and local laws, rules, regulations, market conditions, economic conditions, political climate, and other applicable matters). All findings, conclusions, and recommendations stated in this report are based on the data and information provided, and observations and conditions that existed on the date and time of the property reconnaissance.

Responses received from local, state, or federal agencies or other secondary sources of information after the issuance of this report may change certain facts, findings, conclusions, or circumstances to the report. A change in any fact, circumstance, or industry-accepted procedure upon which this report was based may adversely affect the findings, conclusions, and recommendations expressed in this report.

AEI's limited radon screening, if included, is intended to provide a preliminary screening to evaluate the potential presence of elevated radon concentrations at the site. The proposed scope is not intended to define the full extent of the presence of radon at the subject property. As such, the results should be used for lending purposes only. The recommendations and conclusions presented as a result of the limited preliminary radon screening apply strictly to the property conditions existing at the time the sampling was performed. The sample analytical results are only valid for the time, place, and condition of the site at the time of collection and AEI does not warrant that the results will be repeatable or are representative of past or future conditions.

1.5 LIMITING CONDITIONS/DEVIATIONS

The performance of this Phase I ESA was limited by the following:

- The interior of the portable storage units were not accessed due to confidentiality reasons. Based on the contents (household storage), this limitation is not expected to alter the overall findings of this assessment.
- Due to the large volume of stored products on the property and inside the building, direct visual observation of many of the floor and wall areas of the subject property and building was not possible. Features may be present that were not observed during AEI's field reconnaissance. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.

1.6 DATA GAPS AND DATA FAILURE

According to ASTM E1527-13, data gaps occur when the Environmental Professional is unable to obtain information required by the Standard, despite good faith efforts to gather such information. Pursuant to ASTM E1527-13, only significant data gaps, defined as those that affect the ability of the Environmental Professional to identify RECs, need to be documented.

Data failure is one type of data gap. According to ASTM E1527-13, data failure occurs when all of the standard historical sources that are reasonably ascertainable and likely to be useful have been reviewed and yet the objectives have not been met. Pursuant to ASTM E1527-13, historical sources are required to document property use back to the property's first developed use or back to 1940, whichever is earlier, or periods of five years or greater.

1.6.1 DATA FAILURE

The following data failure was identified during the course of this assessment:

Data Failure	The earliest historical resource obtained during this assessment was an aerial photograph from 1939 indicating that the subject property was developed agriculturally. The lack of historical sources for the subject property dating back to first developed use represents historical data source failure. However, as it is assumed that the subject property would have been previously used for agricultural purposes, if not undeveloped, this data failure is not expected to significantly alter the findings of this assessment.
Information/Sources Consulted	Aerial photographs, city directories, agency records, interview

1.6.2 DATA GAPS

AEI did not identify significant data gaps which affected our ability to identify RECs.

1.7 RELIANCE

All reports, both verbal and written, are for the benefit of KoBre Holdings, LLC and Trojan Storage of San Jose, LLC. This report has no other purpose and may not be relied upon by any other person or entity without the written consent of AEI. Either verbally or in writing, third parties may come into possession of this report or all or part of the information generated as a result of this work. In the absence of a written agreement with AEI granting such rights, no third parties

shall have rights of recourse or recovery whatsoever under any course of action against AEI, its officers, employees, vendors, successors, or assigns. Reliance is provided in accordance with AEI's contract and Standard Terms and Conditions executed by KoBre Holdings, LLC and Trojan Storage of San Jose, LLC on May 16, 2018. The limitation of liability defined in the Terms and Conditions is the aggregate limit of AEI's liability to the client and all relying parties.

This Report also describes the scope, methods and conclusions of AEI and was prepared, performed and rendered in accordance with procedures, practices and standards generally accepted and customary in the AEI's profession for use in similar assignments.

AEI hereby warrants that Comerica Bank, its affiliates and subsidiaries, and their respective successors and assigns (individually and collectively, "Comerica"), may use and rely on the Report to the same extent and upon the same terms, conditions and circumstances as Borrower is entitled to use and rely on the Report. AEI agrees not to distribute or publish the Report without the consent of Borrower and Comerica except as required by law or court order. Further, AEI authorizes Comerica to release a copy of the Report to Borrower for informational purposes only.

AEI certifies that it is covered by errors and omissions liability insurance with a minimum coverage of \$1,000,000 per claim (or occurrence). As to Comerica, AEI specifically waive(s) any dollar amount limitations on liability up to \$1,000,000. In addition, AEI waves any right to indemnification from Comerica. AEI certifies that (i) to the best of its knowledge, AEI is independent of and not a representative or employee or affiliate of Borrower, or any person in which Borrower has an ownership interest, and (ii) AEI has not been unduly influenced by any person in connection with its preparation of the Report or the contents therein.

Utility provider information listed in the table above is provided by online sources, unless otherwise noted above.

Refer to Appendix A: Figures and Appendix B: Property Photographs for site location and description.

2.2 SITE AND VICINITY CHARACTERISTICS

The immediately surrounding properties consist of the following:

Direction from Site	Tenant/Use (Address)	Regulatory Database Listing(s)
North	E McGlincy Lane followed by: Office building (615 E McGlincy Lane) Auto Repair Shop (625 E McGlincy Lane) Bay Area Rodent Solutions (645 E McGlincy Lane) Sterling Marble & Granite (655 E McGlincy Lane) Caliber Collision (665 E McGlincy Lane) Lambert & Sons Floor Covering (695 E McGlincy Lane)	665: RCRA-SQG, CUPA, EMI 615: LUST, HIST LUST, CUPA, HIST CORTESE 625: DRYCELANERS, EDR Hist Cleaner, CUPA 655, 695: CUPA 645: CUPA, PEST LIC
East	Multi-tenant commercial/industrial building (710 E McGlincy Lane)	CUPA
South	Residences (663-675 Regas Drive)	None identified
West	West Valley Construction (580 E McGlincy Lane)	RCRA-SQG, LUST (3), HIST LUST, UST (2), SWEEPS UST, HIST UST (2), CA FID UST, CUPA, HIST CORTESE, FINDS, ECHO, HAZNET

If the surrounding properties are listed in the regulatory database, please refer to Section 5.1 for discussion.

2.3 PHYSICAL SETTING

Geology: According to information obtained from the USGS, the area surrounding the subject property is underlain by alluvial deposits of the Holocene era. Based on a review of the USDA Soil Survey for the area of the subject property, the soils in the vicinity of the subject property are classified as the Urban land-Still complex. Soils from this series are characterized as sandy loam, very fine sandy loam, and silt loam.

USGS Topographic Map:	San Jose West, California Quadrangle
Nearest surface water to subject property:	Los Gatos Creek/0.39 mile west
Gradient Direction/Source:	East/Groundwater monitoring data for the adjacent site at 615 McGlincy Lane, obtained from GeoTracker
Estimated Depth to Groundwater/Source:	7 to 54 feet bgs/Groundwater monitoring data for the adjacent site at 615 McGlincy Lane, obtained from GeoTracker
Wetlands:	No / National Wetlands Inventory
Flood Zone Information:	Zone X / Fema Map #06085C0239H dated 5/18/18

Note: Groundwater flow direction can be influenced locally and regionally by the presence of local wetland features, surface topography, recharge and discharge areas, horizontal and vertical inconsistencies in the types and location of

subsurface soils, and proximity to water pumping wells. Depth and gradient of the water table can change seasonally in response to variation in precipitation and recharge, and over time, in response to urban development such as storm water controls, impervious surfaces, pumping wells, cleanup activities, dewatering, seawater intrusion barrier projects near the coast, and other factors.

3.0 HISTORICAL REVIEW OF SITE AND VICINITY

3.1 HISTORICAL SUMMARY

Reasonably ascertainable standard historical sources as outlined in ASTM Standard E1527-13 were used to determine previous uses and occupancies of the subject property that are likely to have led to RECs in connection with the subject property. A chronological summary of historical data found, including but not limited to aerial photographs, historical city directories, Sanborn fire insurance maps, and agency records, is as follows:

Date Range	Subject Property Description/Use	Source(s)
1939-1978	Orchard and farming, including a prune-drying facility Current shop building constructed circa 1948	Aerial photographs, prior report, interview
1978-2005	Self-storage facility and household recycling depot	Aerial photographs, city directories, prior report, interview
2008-present	Self-storage facility	Aerial photographs, city directories, prior report, interview, agency records, site visit

Based on a review of historical sources, the subject property was identified to consist of orchard and farming land from the early 1900s to 1978, the current self-storage operation from 1978 to present, and a household recycling depot from 1978 to 2005.

The subject property was historically used for agricultural purposes. There is a potential that agricultural chemicals, such as pesticides, herbicides and fertilizers, were used on site, and that the subject property has been impacted by the use of such agricultural chemicals. The entire area of the subject property is either paved over or covered by improvements that make direct contact with any potential remaining concentrations in the soil unlikely. Furthermore, the subject property is developed and used for commercial/light industrial purposes and thus no further action related to the former agricultural use of the subject property is warranted at this time.

3.2 AERIAL PHOTOGRAPHS

AEI reviewed aerial photographs of the subject property and surrounding area. A search was made of the EDR collection of aerial photographs. Aerial photographs were reviewed for the following years:

Year(s)	Subject Property Description	Adjacent Site Descriptions
1939	Agricultural land	NORTH: Agricultural land EAST: Residences and agricultural land SOUTH: Agricultural land WEST: Agricultural land
1948, 1950, 1956, 1963, 1968	Addition of a two adjoining structures on east side of property	No significant changes (Commercial development to the north begins in 1968)

Year(s)	Subject Property Description	Adjacent Site Descriptions
1974	Vacant land and two structures	NORTH: Current commercial structures EAST: Residence SOUTH: Vacant land/storage yard WEST: Dwelling and storage yard
1982	Appears to be the recycling operation. One of the structures was removed	No significant changes
1993, 1998, 2006, 2009, 2012, 2016	Current self-storage operation	NORTH: No significant changes EAST: Appears to be a storage yard (current structure by 2009) SOUTH: Current residences WEST: Current construction operation

Environmental concerns with the subject property as agricultural land are discussed in Section 3.0.

3.3 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance maps were developed in the late 1800s and early 1900s for use as an assessment tool for fire insurance rates in urbanized areas. A search was made of the EDR collection of Sanborn Fire Insurance maps.

Sanborn map coverage was not available for the subject property.

3.4 CITY DIRECTORIES

A search of historical city directories was conducted for the subject property utilizing EDR. The following table summarizes the results of the city directory search.

Year(s)	Address - Occupant Listed
1922-1991	700 E McGlincy Lane - No listings
1996	700 E McGlincy Lane - Instant Storage Service, Bay Area Recycling Center
2010	700 E McGlincy Lane - Instant Storage Service, Pipeyard Inc, Asset Recovery Service
2014	700 E McGlincy Lane - Instant Storage Service, Pipeyard Inc

AEI did not identify potential environmental concerns in association with the historical use of the subject property during the city directory review.

No listings were found for the address 680 E McGlincy Lane.

If available, copies of historical city directories are provided in the report appendices.

3.5 HISTORICAL TOPOGRAPHIC MAPS

In accordance with our approved scope of services, historical topographic maps were not reviewed as a part of this assessment.

3.6 CHAIN OF TITLE

In accordance with our approved scope of services, a chain of title search was not performed as part of this assessment.

4.0 REGULATORY AGENCY RECORDS REVIEW

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous substance use, storage, and/or unauthorized releases that may have impacted the subject property. In addition, information pertaining to AULs, defined as legal or physical restrictions, or limitations on the use of, or access to, a site or facility, is requested.

4.1 LOCAL ENVIRONMENTAL HEALTH DEPARTMENT AND/OR STATE ENVIRONMENTAL AGENCY

On May 23, 2018, AEI contacted the Santa Clara County Environmental Health Department via email for information on the subject property. Files at this agency may contain information regarding hazardous substance storage and use, underground storage tanks, unauthorized releases of petroleum hydrocarbons or other contaminants that may affect the soil or groundwater in the area, wells and/or septic systems.

According to Ms. Melissa Bellosso, Senior Office Specialist, no records were on file for the subject property.

4.2 FIRE DEPARTMENT

On June 5, 2018, AEI contacted the Santa Clara County Fire Department via office visit for information on the subject property to identify any evidence of previous or current hazardous substance usage and/or for any historical information available for the subject property.

According to Ms. Victoria Bebee, the following information was on file for the subject property:

Date	Occupant	Document Type	Document Notes/Violations
1996	Instant Storage Service	HMMP	Inventory includes: Acetylene Oxygen Non-flammable gas
1998	Instant Storage Service	Hazardous Materials Inspection Report	States that business needs permit and needs to double chain acetylene tanks.
2000, 2003, 2004, 2006	Instant Storage Service	Hazardous Materials Inspection Report	Inventory includes: Acetylene Oxygen Argon No violations noted.
2005	Instant Storage Service	Hazardous Materials Plan Closure	Closure plan was approved
1996-1997 1998-1999 1999-2000 2000-2001 2001-2002 2002-2003	Instant Storage Service	HMMP Declaration	States that the approved HMMP from 1996 is still current and being implemented as submitted.

Date	Occupant	Document Type	Document Notes/Violations
2012	Instant Storage Service	Inspection notice	HazMat Closure includes the removal of a 500-gallon propane AST and removal of oxygen and acetylene. Some welding gases are still being used on site.
2013, 2015	Instant Storage Service	Hazardous Materials Inspection Report	No violations noted.

Review of information on file for the subject property at the Santa Clara County Fire Department revealed the use of compresses gases on site. Based on the nature of gases, the presence of these materials is not expected to represent a significant environmental concern.

4.3 BUILDING DEPARTMENT

On June 5, 2018, AEI contacted the Campbell Building Department via website and office visit for information on the subject property in order to identify historical tenants, features of concern and property use.

No building permits were on file for the subject property.

4.4 PLANNING DEPARTMENT

On June 5, 2018, AEI contacted the Campbell Planning Department via office visit for information on the subject property in order to identify AULs associated with the subject property.

AEI spoke with a department representative, who indicated that evidence indicating the existence of AULs was not on file for the subject property with the Campbell Planning Department.

4.5 COUNTY ASSESSOR OFFICE

On May 23, 2018, AEI contacted the Santa Clara County assessor's office via telephone for information on the subject property in order to determine the earliest recorded date of development and use.

According to the Santa Clara County assessor's office, the total lot size is 2.12 acres.

The date of construction and building square footage were not on file.

4.6 OIL AND GAS WELLS/PIPELINES

On May 23, 2018, AEI reviewed the California Department of Conservation's Division of Oil, Gas, and Geothermal Resources maps and the National Pipeline Mapping System (NPMS) Public Map Viewer concerning the subject property and nearby properties. The maps contain information regarding oil and gas development.

According to the California Department of Conservation's Division of Oil, Gas, and Geothermal Resources map, oil or gas wells are not located within 500 feet of the subject property. AEI did

not identify evidence of environmental concerns during the map review.

According to the NPMS Public Map Viewer, pipelines are not located within 500 feet of the subject property. AEI did not identify evidence of environmental concerns during the map review.

4.7 OTHER AGENCIES SEARCHED

On May 23, 2018, AEI contacted the Bay Area Air Quality Management District (BAAQMD) for information regarding any records of PTO, NOV, or NTC issued to occupants of the subject property and associated with air emission equipment primarily related to stationary sources of air pollution, such as dry cleaning machines, boiler, and/or underground storage tanks.

No information indicating the existence of any PTOs, NOVs, or NTCs was on file for the subject property with the BAAQMD.

On May 23, 2018, AEI accessed the California Department of Toxic Substances Control (DTSC) Hazardous Waste Tracking System (HWTS) online database for information pertaining to hazardous waste disposal associated with the subject property. The HWTS generates reports on hazardous waste shipments for generators, transporters, and treatment, storage or disposal facilities (TSDFs).

No information indicating the generation of hazardous wastes was on file for the subject property with the DTSC HWTS.

On May 23, 2018, AEI accessed the California Department of Toxic Substances Control (DTSC) EnviroStor database, which contains information of investigation, cleanup, permitting, and/or corrective actions that are planned, being conducted or have been completed under DTSC oversight.

No information indicating any release of hazardous materials from the subject property was found on the EnviroStor website.

On May 23, 2018, AEI accessed the California State Water Resources Control Board (SWRCB) GeoTracker database, a data management system for managing sites that impact groundwater, especially those requiring groundwater cleanup [USTs, Department of Defense, Site Cleanup Program] as well as permitted facilities such as operating USTs and land disposal sites.

No information indicating any release of hazardous materials from the subject property was found on the GeoTracker website.

Records reviewed for a nearby site are further discussed in Section 5.1.

On May 23, 2018, AEI contacted the Santa Clara Valley Water District (SCVWD) to determine if any wells exist on the subject property. According to Ms. Barbara Murray, Hydrologic Systems Analyst II, no wells are on the property.

4.8 STATE ENVIRONMENTAL SUPERLIENS AND PROPERTY TRANSFER LAWS

On June 7, 2018, the NETR Online Environmental Lien and AUL State Statuses website was visited to determine if the State of California has environmental superlien and/or property transfer laws which would allow environmental authorities the right to place a first priority lien on the subject property.

According to the NETR Online Environmental Lien and AUL State Statuses website, the State of California does not have environmental superlien and/or property transfer laws.

5.0 REGULATORY DATABASE RECORDS REVIEW

AEI contracted Environmental Data Resources, Inc (EDR) to conduct a search of publicly available information from federal, state, tribal, and local databases containing known and suspected sites of environmental contamination and sites of potential environmental significance. Data gathered during the current regulatory database search is compiled by EDR into one regulatory database report. Location information for listed sites is designated using geocoded information provided by federal, state, or local agencies and commonly used mapping databases with the exception of "Orphan" sites. Due to poor or inadequate address information, Orphan sites are identified but not geocoded/mapped by EDR, rather, information is provided based upon vicinity zip codes, city name, and state. The number of listed sites identified within the approximate minimum search distance from the federal and state environmental records database listings specified in ASTM Standard E1527-13 is summarized in Section 5.1, along with the total number of Orphan sites. A copy of the regulatory database report is included in Appendix C of this report.

The subject property was not identified in the databases reviewed.

In determining if a listed site is a potential environmental concern to the subject property, AEI generally applies the following criteria to classify the site as lower potential environmental concern: 1) the site only holds an operating permit (which does not imply a release), 2) the site's distance from, and/or topographic position relative to, the subject property, and/or 3) the site has recently been granted "No Further Action" by the appropriate regulatory agency.

5.1 RECORDS SUMMARY

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
NPL	1	No	0	
DELISTED NPL	0.5	No	0	
SEMS (formerly CERCLIS)	0.5	No	0	
SEMS-ARCHIVE (formerly CERCLIS NFRAP)	0.5	No	1	No
RCRA CORRACTS	1	No	0	
RCRA-TSDF	0.5	No	0	
RCRA LQG, SQG, CESQGs, VGN, NLR	SP/ADJ	No	2	No
US ENG CONTROLS	SP	No	0	
US INST CONTROLS	SP	No	0	
ERNS	SP	No	0	
STATE/TRIBAL HWS	1	No	8	No
STATE/TRIBAL SWLF	0.5	No	0	
STATE/TRIBAL REGISTERED STORAGE TANKS	SP/ADJ	No	0	
STATE/TRIBAL LUST	0.5	No	39	No

Database	Search Distance (Miles)	Subject Property Listed	Number of Listings within Search Distance	Recognized Environmental Condition or Other Environmental Consideration (Yes or No)
STATE/TRIBAL EC and IC	SP	No	0	
STATE/TRIBAL VCP	0.5	No	0	
STATE/TRIBAL BROWNFIELD	0.5	No	0	
ORPHAN	N/A	No	0	
ADDITIONAL ENVIRONMENTAL RECORD SOURCES	SP/ADJ	No	26	Yes

Facility Name: Modern Bench Operations

Database(s): RCRA-SQG, CUPA, EMI

Address: 665 McGlincey Lane

Distance: Adjacent

Direction: North (hydrologically cross-gradient)

Comments: The RCRA-SQG and CUPA listings state that the site is a small quantity generator of hazardous waste and recycles the waste on site.

The EMI listing states that the sit emits toxic air pollutants.

Based on the lack of a documented release, the review of regulatory records was not deemed necessary and therefore these listings are not expected to represent a significant environmental concern.

Facility Name: Bauer Concrete

Database(s): LUST, HIST LUST, CUPA, HIST CORTESE

Address: 615 McGlincey Lane

Distance: Adjacent

Direction: West northwest (hydrologically up- to partially cross-gradient)

Comments: The LUST, HIST LUST, and HIST CORTESE listings state that a release of gasoline impacted soil at the site in 1997. As of 1997 the case status has been Completed- Case Closed.

The UST, SWEEPS UST and CA FID UST listings state that the site has four active USTs.

The HIST UST listing states that the site historically had four USTs.

The CUPA listing states that the site generates waste oil.

Based on the media impacted and case closure, the review of regulatory records was not deemed necessary and therefore these listings are not expected to represent a significant environmental concern.

Facility Name: HBL Drapery & Nation

Database(s): DRYCELANERS, EDR Hist Cleaner, CUPA

Address: 625 McGlincey Lane

Distance: Adjacent

Direction: West northwest (hydrologically up- to cross-gradient)

Comments: The DRYCLEANERS listing states that the site was occupied by a dry cleaner.

The CUPA listing indicates that the site generates hazardous waste.

The EDR Hist Cleaner listing states that the site was occupied by a dry cleaner from 1977 to 2014.

Dry cleaning operations have typically use chlorinated solvents, particularly PCE, during the dry cleaning process. These solvents, even when properly stored and handled, can readily migrate into the subsurface as a result of small releases associated with on-site operations. Chlorinated solvents are highly mobile chemicals that can easily accumulate in soil and soil gas, and migrate to groundwater beneath a facility. Information pertaining to the type of solvents used and/or additional concerns were not reported. The databases did not suggest that releases had been identified. Based on the number of years of operation (from 1977 to 2014) and the cleaners proximity to the subject property, the potential exists that, if a release of chlorinated solvents occurred at this site, the subsurface of the subject property may have also been impacted. Assessment of the subject property does not indicate that the subject property would be investigated as a source of this contamination, and therefore, it is unlikely that the subject property owner would be responsible for any cleanup costs associated with a release at this site.

Facility Name: West Valley Construction

Database(s): RCRA-SQG, LUST (3), HIST LUST, UST (2), SWEEPS UST, HIST UST (2), CA FID UST, CUPA, HIST CORTESE, FINDS, ECHO, HAZNET

Address: 580 McGlincey Lane

Distance: Adjacent

Direction: West (hydrologically up-gradient)

Comments: The RCRA-SQG and HAZNET listings indicate that the site generates hazardous waste.

The LUST listing states that a release of diesel impacted soil. As of 1999 the case status has been Completed- Case Closed.

The HIST UST listing states that three USTs were historically located on site.

No significant information is provided in the FINDS or ECHO listings, however they are associated with the above listings.

Based on the media impacted and case closure, the review of regulatory records was not deemed necessary and therefore these listings are not expected to represent a significant environmental concern.

Facility Name: Anderson Automotive, Pro-Formance Painting, Lambert Lube, Condor Mfg Co

Database(s): CUPA (5), PEST LIC

Address: 645, 655, 695, 710 McGlincey Lane

Distance: Adjacent

Direction: Variable to the north (hydrologically cross-gradient)

Comments: These listings indicate several of the north adjacent sites generate hazardous waste.

Additionally, 645 E McGlincey Lane was also listed as a PEST LIC site, indicating that the property stores pesticides on site.

Based on the lack of a documented release, the review of regulatory records was not deemed necessary and therefore these listings are not expected to represent a significant environmental concern.

Facility Name: Orchard City Floor

Database(s): SLIC Address: 480 E McGlincy Lane Distance: 0.144 mile Direction: West southwest (hydrologically up- to partially cross-gradient)
Comments: This listing states that a release of Gasoline/TPH, Waste oil/Motor/Hydraulic/Lubricating oil impacted groundwater. In 1995 an aboveground storage tank and a sump were removed from the site, and 20 cubic yards of contaminated soil was excavated. As of 2016 the case status has been Completed- Case Closed. According to the Case Closure letter on GeoTracker, groundwater was not impacted or sampled. Based on the media impacted, relative distance, and case closure, this listing is not expected to represent a significant environmental concern.

5.2 VAPOR MIGRATION

AEI reviewed reasonably ascertainable information for the subject and nearby properties, including a regulatory database, files for nearby release sites, and/or historical documentation, to determine if potential vapor-phase migration concerns may be present which could impact the subject property.

Based on a review of available resources as documented in this report, AEI did not identify significant on-site concerns and/or regulated listings from nearby sites which suggest that a vapor-phase migration concern currently exists at the subject property.

6.0 INTERVIEWS AND USER PROVIDED INFORMATION

6.1 INTERVIEWS

Pursuant to ASTM E1527-13, the following interviews were performed during this assessment in order to obtain information indicating RECs in connection with the subject property.

6.1.1 INTERVIEW WITH OWNER

The subject property owner, Mr. Jim Chalmers of Instant Storage Service, was contacted in person on June 4, 2018. Mr. Chalmers has been associated with the subject property since 1978. Mr. Chalmers stated that the property was formerly occupied by agricultural land and a prune-drying facility, an irrigation supply, a household recycling center, and contractor storage and farming. The current structure on site was formerly occupied by an auto and truck repair for maintenance of company vehicles. Mr. Chalmers was asked if he was aware of any of the following:

	Yes	No
Any knowledge of USTs, clarifiers or oil/water separators, sumps, or other subsurface features.		✓
Any knowledge of previous environmental investigations conducted on site.	✓	
Any knowledge of current or past industrial operations and/or other operations which would involve the use of hazardous substances and/or petroleum products.	✓	
Any known plans for site redevelopment or change in site use.	✓	
Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property.		✓
Any pending, threatened or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property.		✓
Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.		✓
Any incidents of flooding, leaks, or other water intrusion, and/or complaints related to indoor air quality.		✓
Comments:		
A prior Phase I and Phase I Update were conducted for the property; Refer to Section 6.3.		
The building was formerly used for truck and mechanical equipment repair, which used hazardous substances including oils and water-based paint. Based on the lack of regulatory database listings and lack of evidence of mismanagement, the prior use of hazardous substances in connection with the repair area is not expected to represent a significant environmental concern.		
There are plans to redevelop the site with mini-storage buildings.		

6.1.2 INTERVIEW WITH KEY SITE MANAGER

The property owner, Mr. Jim Chalmers of Instant Storage Service, is also the key site manager. Refer to Section 6.1.1.

6.1.3 PAST OWNERS, OPERATORS, AND OCCUPANTS

AEI did not attempt to interview past owners, operators, and occupants of the subject property because information from these sources would likely be duplicative of information already obtained from other sources.

6.1.4 INTERVIEW WITH OTHERS

Information obtained during interviews with local government officials is incorporated into the appropriate segments of this section.

6.2 USER PROVIDED INFORMATION

User provided information is intended to help identify the possibility of RECs in connection with the subject property. According to ASTM E1527-13 and the EPA Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), certain items should be researched by the prospective landowner or grantee, and the results of such inquiries may be provided to the Environmental Professional. The responsibility for qualifying for LLPs by conducting the inquiries ultimately rests with the User, and providing the information to the Environmental Professional would be prudent if such information is available.

The User did not complete the ASTM User Questionnaire or provide the User information to AEI. AEI assumes that qualification for the LLPs is being established by the User in documentation outside of this assessment.

6.2.1 ENVIRONMENTAL LIENS

In accordance with our approved scope of services, AEI contracted Environmental Data Resources, Inc (EDR) to perform an environmental lien search for the subject property.

According to EDR, environmental liens were not identified during the review of historical ownership documentation. A copy of the EDR report is provided in the appendices.

6.3 PREVIOUS REPORTS AND OTHER PROVIDED DOCUMENTATION

Documentation was provided to AEI by Mr. Jim Chalmers, Owner during this assessment. A summary of this information follows:

Phase I Environmental Site Assessment (680-750 East McGlincey Lane), prepared by ERAS Environmental, Inc (April 13, 2005)

This assessment was conducted for the subject property and the two adjoining parcels to the east. During the time of the assessment, the subject property was occupied by Instant Storage Service, Bay Area Recycling Center, and residences.

During the site reconnaissance, various compressed gases and small quantities of spray lubricants were observed on the property. No environmental concerns associated with these materials were noted.

No RECs were identified during the assessment and ERAS recommended no further work be

performed.

This report describes the subject property generally consistent with current conditions.

Phase I Environmental Site Assessment Update (680-750 East McGlincey Lane), prepared by ERAS Environmental, Inc (September 5, 2008)

ERAS performed a site visit and reviewed information since the previous Phase I was conducted and determined that the only change to the property was the addition of two condominium buildings. No significant changes had been made which would indicate a REC since the previous ERAS reports. No further work was recommended.

This report additionally notes updates to the ESA in 2006, 2007, and March 2008, however no changes were observed which would affect environmental conditions.

This report describes the subject property generally consistent with current conditions.

A copy of the report is included in the appendices.

Note: If the above documentation was not prepared by AEI, the information obtained was not verified for accuracy and a critique of the information contained therein is beyond the scope of this assessment.

7.0 SITE RECONNAISSANCE

Site Reconnaissance Date	June 5, 2018
AEI Site Assessor	Natalie Vaughan
Property Escort/Relationship to Property	Mr. Jim Chalmers/Owner
Units/Areas Observed	Interior of the building and exterior of the property
Area(s) not accessed and reason(s)	The interior of the portable storage units were not accessed due to confidentiality reasons. Based on the contents (household storage), this limitation is not expected to alter the overall findings of this assessment. Due to the large volume of stored products on the property and inside the building, direct visual observation of many of the floor and wall areas of the subject property and building was not possible. Features may be present that were not observed during AEI's field reconnaissance. Based on the quality of information obtained from other sources, this limitation is not expected to alter the overall findings of this assessment.
Weather	Warm and sunny

7.1 SUBJECT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	✓	Regulated Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✓	Aboveground Hazardous Substance or Petroleum Product Storage Tanks (ASTs)
	✓	Underground Hazardous Substance or Petroleum Product Storage Tanks (USTs)
	✓	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✓	Unidentified Substance Containers
	✓	Electrical or Mechanical Equipment Likely to Contain Fluids
	✓	Interior Stains or Corrosion
	✓	Strong, Pungent, or Noxious Odors
	✓	Pools of Liquid
✓		Drains, Sumps, and Clarifiers
	✓	Pits, Ponds, and Lagoons
	✓	Stained Soil or Pavement
	✓	Stressed Vegetation
	✓	Solid Waste Disposal or Evidence of Fill Materials
	✓	Waste Water Discharges
	✓	Wells
	✓	Septic Systems
	✓	Biomedical Wastes
	✓	Dry Cleaners
✓		Other

The subject property is currently occupied by Instant Self Storage. On-site operations consist of self-storage.

DRAINS, SUMPS, AND CLARIFIERS

Several storm drains were observed on the subject property. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

OTHER

Trolley cart tracks were observed on the ground on the interior and exterior of the subject property building. According to the owner, the tracks were used to transport dried prunes when the agricultural prune-drying facility occupied the property prior to 1970.

Based on the lack of hazardous substances used in the operation, the presence of the tracks is not expected to represent a significant environmental concern.

7.2 ADJACENT PROPERTY RECONNAISSANCE FINDINGS

Yes	No	Observation
	✓	Hazardous Substances/Wastes and/or Petroleum Products in Connection with Property Use
	✓	Aboveground Hazardous Substance or Petroleum Product Storage Tanks (ASTs)
	✓	Underground Hazardous Substance or Petroleum Product Storage Tanks (USTs)
	✓	Hazardous Substance and Petroleum Product Containers Not in Connection with Property Use
	✓	Unidentified Substance Containers
✓		Electrical or Mechanical Equipment Likely to Contain Fluids
	✓	Strong, Pungent, or Noxious Odors
	✓	Pools of Liquid
✓		Drains, Sumps, and Clarifiers
	✓	Pits, Ponds, and Lagoons
	✓	Stained Soil or Pavement
	✓	Stressed Vegetation
	✓	Solid Waste Disposal or Evidence of Fill Materials
	✓	Waste Water Discharges
	✓	Wells
	✓	Septic Systems
	✓	Dry Cleaners
	✓	Other

ELECTRICAL OR MECHANICAL EQUIPMENT LIKELY TO CONTAIN FLUIDS

Toxic PCBs were commonly used historically in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors. According to United States EPA regulation 40 CFR, Part 761, there are three categories for classifying such equipment: <50 ppm of PCBs is considered "Non-PCB"; between 50 and 500 ppm is considered "PCB-Contaminated"; and >500 ppm is considered "PCB-Containing". Pursuant to 15 U.S.C. 2605(e)(2)(A), the manufacture, process, or distribution in commerce or use of any polychlorinated biphenyl in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

Transformers

The management of potential PCB-containing transformers is the responsibility of the local utility or the transformer owner. Actual material samples need to be collected to determine if transformers are PCB-containing.

Two pole-mounted transformers were observed on the adjacent sites during the site reconnaissance. No spills, staining, or leaks were observed on or around the transformers. Based on the good condition of the equipment, the transformers are not expected to represent a significant environmental concern.

DRAINS, SUMPS, AND CLARIFIERS

Several storm drains were observed on the adjacent properties. AEI did not observe evidence of hazardous substances or petroleum products in the vicinity of the drains. Based on the use of the drains solely for storm water runoff, the presence of the drains is not expected to represent a significant environmental concern.

8.0 OTHER ENVIRONMENTAL CONSIDERATIONS

8.1 ASBESTOS-CONTAINING BUILDING MATERIALS

Potential ACMs were not observed in the building on the subject property.

8.2 LEAD-BASED PAINT

Painted surfaces were not observed on the building on the subject property.

8.3 RADON

Radon is a naturally-occurring, odorless, and invisible gas. Natural radon levels vary and are closely related to geologic formations. Radon may enter buildings through basement sumps or other openings.

The United States EPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three radon zones, with Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the EPA Action Limit of 4.0 pCi/L. It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the EPA recommends site specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not requested as part of this assessment. According to the US EPA, the radon zone level for the area is Zone 2, which has a predicted average indoor screening level between 2 pCi/L and 4 pCi/L, equal to or below the action level of 4 pCi/L set forth by the US EPA.

8.4 DRINKING WATER SOURCES AND LEAD IN DRINKING WATER

The City of Mountain View supplies potable water to the subject property. The most recent water quality report (2016) states that the 90th percentile value for lead levels in samples obtained from the area's water supply was 7.6 ppb . Only one samples out of a total of 34 samples had lead levels exceeding the regulatory action level. Typical sources of lead in drinking water include corrosion of household plumbing systems. Overall, lead levels are well within standards established by the United States EPA.

8.5 MOLD/ INDOOR AIR QUALITY ISSUES

Molds are simple, microscopic organisms, which can often be seen in the form of discoloration, frequently green, gray, white, brown, or black. When excessive moisture or water accumulates indoors, mold growth will often occur, particularly if the moisture problem remains undiscovered or is not addressed. As such, interior areas of buildings characterized by poor ventilation and high humidity are the most common locations of mold growth. Building materials including drywall, wallpaper, baseboards, wood framing, insulation, and carpeting often play host to such growth. Mold spores primarily cause health problems through the inhalation of mold spores or the toxins they emit when they are present in large numbers. This can occur primarily when there is active

mold growth within places where people live or work.

Mold, if present, may or may not visually manifest itself. Neither the individual completing this inspection, nor AEI has any liability for the identification of mold-related concerns except as defined in applicable industry standards. In short, this Phase I ESA should not be construed as a mold survey or inspection.

AEI observed interior areas of the subject property buildings to identify the potential presence of mold. AEI did not note obvious visual or olfactory indications of the presence of mold, nor did AEI observe obvious indications of significant water damage. As such, no bulk sampling of suspect surfaces was conducted as part of this assessment and no additional action with respect to suspect mold appears to be warranted at this time.

This activity was not designed to discover all areas which may be affected by mold growth on the subject property. Rather, it is intended to give the client an indication if significant (based on observed areas) mold growth is present at the subject property. Additional areas of mold not observed as part of this limited assessment, possibly in pipe chases, HVAC systems, and behind enclosed walls and ceilings, may be present on the subject property.

9.0 FINDINGS, CONCLUSIONS, AND RECOMMENDATIONS

9.1 FINDINGS

9.1.1 RECOGNIZED ENVIRONMENTAL CONDITIONS

Recognized Environmental Condition (REC) is defined by the ASTM Standard Practice E1527-13 as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

This assessment has revealed no evidence of RECs in connection with the subject property.

9.1.2 CONTROLLED RECOGNIZED ENVIRONMENTAL CONDITIONS

Controlled Recognized Environmental Condition (CREC) is defined by the ASTM Standard Practice E1527-13 as a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls.

This assessment has revealed no evidence of CRECs in connection with the subject property.

9.1.3 HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS

Historical Recognized Environmental Condition (HREC) is defined by the ASTM Standard Practice E1527-13 as a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls.

This assessment has revealed no evidence of HRECs in connection with the subject property.

9.1.4 OTHER ENVIRONMENTAL CONSIDERATIONS (NON-ASTM SCOPE)

Other Environmental Considerations include, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of ACMs, LBP, radon, mold, and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no related conditions of concern in connection with the subject property.

9.2 CONCLUSIONS

AEI has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of 680 and 700 East McGlincy Lane, Campbell, Santa Clara County, California, the Property. Any exceptions to or deletions from this practice are described

in Section 1.5 of this report. This assessment has revealed no evidence of RECs or CRECs in connection with the subject property.

AEI's assessment included an evaluation of other Environmental Conditions including, but are not limited to, de minimis conditions and/or environmental considerations such as the presence of asbestos-containing materials, radon, lead-based paint, wetlands and mold and lead in drinking water, which can affect the liabilities and financial obligations of the client, the health and safety of site occupants, and the value and marketability of the subject property.

This assessment has revealed no evidence of related conditions of concern in connection with the subject property.

9.3 RECOMMENDATIONS

As a result of this assessment, AEI does not recommend further investigation of the subject property at this time.

10.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR Part 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/09/2018 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk

EXECUTIVE SUMMARY

characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 39 LUST sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 4 CPS-SLIC sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 3 UST sites within approximately 0.25 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 7 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CUPA Listings: A listing of sites included in the county's Certified Unified Program Agency database. California's Secretary for Environmental Protection established the unified hazardous materials and hazardous waste regulatory program as required by chapter 6.11 of the California Health and Safety Code. The Unified Program consolidates the administration, permits, inspections, and enforcement activities.

A review of the CUPA Listings list, as provided by EDR, has revealed that there are 35 CUPA Listings sites within approximately 0.25 miles of the target property.

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there is 1 DRYCLEANERS site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SOUTH VALLEY TRANSMI	597 UNION AVE	E 0 - 1/8 (0.094 mi.)	F29	43

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS AIR POLLUTANT MAJOR

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Potential Media Affected:

Soil

Potential Contaminants of Concern:

Polychlorinated biphenyls (PCBs), Other Insecticides / Pesticide /
Fumigants / Herbicides, Arsenic, Lead, Zinc, Diesel, Waste Oil / Motor
/ Hydraulic / Lubricating

Site History:

Subsurface investigation found historic on-site solid waste disposal
(rusted can lids, metal pipes, other metal objects, glass bottles,
sheet metal, metal conduit and broken chunks of reinforced concrete)
on the largest parcel 412-08-035. Proposed to remove solid waste and
impacted soil prior to redevelopment of property for residential use.

Local Case Number: 08S1W02A01f
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Benzene, Gasoline, MTBE / TBA / Other Fuel Oxygenates
Site History: In February 1990, one 10,000-gallon steel gasoline UST, one 12,000-gallon fiberglass gasoline UST, and one 550-gallon steel waste-oil UST were removed and replaced The USTs appeared in good condition following removal and no holes or cracks were observed. During removal of fuel USTs approximately 50 gallons of fuel was inadvertently released into the UST pit. Soil in the area of spillage

was immediately excavated and a confirmation soil sample was collected from the bottom of the excavation at a depth of approximately 16 feet below grade (bg). Laboratory analytical results of the collected soil sample revealed the presence of total petroleum hydrocarbons as gasoline (TPH-G) at a concentration of 6,100 milligrams per kilogram (mg/kg). Based on the analytical results, additional excavation activities were performed in the fuel tank pit to a depth of 21 feet bg and additional soil samples were collected from the base of the excavation. Laboratory analytical data from the collected samples revealed the presence of TPH-G ranging from 6.0 to 1,700 mg/kg. An approximate total of 400 cubic yards of soil were removed from the Site during the 1990 UST removal activities. During the period from June 1990 through February 1992, 15 exploratory borings were drilled at the Site to define the horizontal and vertical extent of petroleum hydrocarbons beneath the Site. The borings were completed to depths ranging from 36 to 40.5 feet bg. Soil analytical data collected during the assessment activities confirmed that petroleum hydrocarbons were concentrated in the area of the Site fuel USTs. During the period from June 1994 through August 1995, three vapor extraction wells (VE-1 through VE-3) and four groundwater monitoring wells (PMW-1 through PMW-4) were installed at the Site. The wells were completed to total depths ranging from 37.5 to 42 feet bg. The groundwater monitoring and vapor extraction wells were sampled quarterly from installation through April 1997 when monitoring was modified to a semi-annual basis. The residual dissolved petroleum hydrocarbon plume is contained on-site and concentrated in the area of wells VE-1, VE-2, and VE-4 which are located in close proximity to the fuel USTs. Between September 2001 and October 2006, several SVE and DPE events were conducted. In April and September 2007, two 14-day ozone injection events were conducted. In September 2008, 110 gallons of magnesium sulfate was injected into the perched groundwater. Additional magnesium sulfate injections have been proposed. In April 2007, ozone injection was attempted in the area of VE1. In July 2008 and again between 2009-2010, magnesium sulfate injection was conducted in the area of VE1. Confirmation soil sampling was conducted in November 2011.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 04/27/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA

Number of Days to Update: 92	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

UTM Y (Meters):	4126087.2
Elevation:	208 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5640416 SAN JOSE WEST, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06085C0239H	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>

06085C0243H	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
SAN JOSE WEST	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile NNW
Site Name:	Noble Properties/Orchard Oak
Site EPA ID Number:	CAD981990021
Groundwater Flow Direction:	NNE, BUT MAY BE ALTERED BY LOCAL PUMPING.
Inferred Depth to Water:	100 feet to 130 feet.
Hydraulic Connection:	An aquitard that separates the surficial and lower aquifers is discontinuous or leaky in the vicinity of the site.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Cenozoic
System: Quaternary
Series: Quaternary
Code: Q (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 5.60
2	9 inches	41 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60
3	41 inches	76 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 0.60 Min: 0.20	Max: 7.80 Min: 5.60

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: No Other Soil Types

Surficial Soil Types: No Other Soil Types

Shallow Soil Types: No Other Soil Types

Deeper Soil Types: No Other Soil Types

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AEI Consultants were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

II. Facility Information

A. Hazardous Materials

Please complete the following table for each hazardous material and/or hazardous waste on-site:

Material Name	Form of Primary Containment	Form of Secondary Containment	Separation from Incompatibles	Type of Monitoring
Acetylene	Tank	Chain	N/A	VIS
Oxygen	Tank	Chain	N/A	VIS
Non Flammable Gas	Tank	Chain	N/A	VIS

B. Emergency Equipment

List the emergency equipment which is provided on site (fire extinguishers, spill absorbent, built-in fire protection systems, etc.)

Equipment	Quantity
1. Fire Extinguishers	5
2. _____	_____
3. _____	_____
4. _____	_____

C. Hazardous Waste

Do you generate hazardous waste; e.g., waste motor oil, waste antifreeze, etc.?

☐ Yes ☒ No

If "yes", indicate the following:

- Type of waste generated: _____
- Name and address of waste disposal hauler used

- Your EPA identification number # _____

II. Facility Information (cont)

96-3299

D. Hazardous Materials Classification

Place a check mark by each category of material to be stored and utilize the classification abbreviations when showing hazardous material locations on the facility drawing below.

☐ Blasting Agent BA	☐ Flammable Solid FS
☐ Combustible Liquid.....CL	☐ Irritating Material.....IRR
☐ Corrosive CORR	☐ Non-Flammable Gas.....NFG
☐ Etiological Agent.....ETI	☐ Organic Peroxide.....OP
☐ Explosives Class "A" EXP-A	☐ Other Regulated Material.....ORM
☐ Explosives Class "B".....EXP-B	☐ Oxidizers.....OXY
☐ Explosives Class "C" EXP-C	☐ Poison "A" POIS-A
☐ Flammable Liquid.....FL	☐ Poison "B" POIS-B
☐ Flammable Gas FG	☐ Radioactive Material.....RAD

E. Facility Drawing

Below provide a simple line drawing of the facility showing:

- The location of the hazardous materials and/or hazardous wastes
- The hazard class(es) of the hazardous materials and/or wastes (see "D" above)
- The physical state of the materials (solid, liquid or gas)
- The on-site location of this Hazardous Materials Management Plan
- The location of the Material Safety Data Sheet for each stored material

Driveway

Storage/Secondary Containment

- ☐ Provide or improve secondary containment for hazardous liquids
- ☐ Secondary containment must be kept clean and dry
- ☐ Provide a compatible sealant on floor when floor is used as secondary containment
- ☐ Secondary containment must be enlarged to accommodate the volume of material stored
- ☐ Initiate or improve monitoring of hazardous materials storage containers

Placarding/Labeling

- ☐ Provide placarding on exterior of building, storage enclosures and areas
- ☐ All hazardous materials containers shall be labeled indicating the material inside
- ☐ All hazardous waste containers shall be labeled and marked with the accumulation start date
- ☐ Piping/tubing carrying hazardous materials shall be labeled every 20 linear feet

Safety Controls/Storage and Usage

- ☒ Secure all compressed gas cylinders with a chain or strap to prevent them from falling or being knocked over
- ☐ Enclosure vents for oxygen and nitrous oxide gas storage shall be kept unobstructed
- ☐ Discontinue the storage of material in excess of allowable limits
- ☐ Discontinue gravity dispensing of hazardous materials without a self-closing valve or faucet
- ☐ Spraying operations may be conducted only within an approved spray booth or area
- ☐ Provide or improve ventilation in hazardous materials storage and usage areas
- ☐ Flammable liquids stored in excess of 10 gal. inside shall be stored within an approved storage cabinet
- ☐ Replace or repair leaking or damaged containers

Hazardous Materials Business Plan/Management Plan/Inventory Statement

Mrs. Gloria Montgomery
16285 W. Ellenwood Ave.
Monte Sereno, CA 95008

Subject: Remedial Action Completion Certificate for Montgomery Property, 480 McGlincy Lane
Campbell, CA
SMS File No. (to be assigned)

Dear Mrs. Montgomery:

This letter confirms the completion of site investigation and remedial action for the above ground tank and sump release (formerly or currently) located at the above-described location. Enclosed is the Case Closure Summary for the referenced site for your records.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action related to the above ground tank and sump release is required. If a change in land use is proposed, the owner must promptly notify this agency.

Please contact John West at (510) 286-1247 if you have any questions regarding this matter.

Sincerely,

Lawrence P. Kolb
Acting Executive Officer

List Enforcement Actions Rescinded: None		

V. TECHNICAL REPORTS, CORRESPONDENCE ETC., THAT THIS CLOSURE RECOMMENDATION WAS BASED UPON

Title:	Date:
Technical Report: Tank Closure by Associated Terra Consultants, Inc.	6/29/95

VI. ADDITIONAL COMMENTS, DATA, ETC.

PLEASE INCLUDE/ATTACH THE FOLLOWING AS APPROPRIATE:

- 1) SITE MAP INDICATING TANK PIT LOCATION, MONITORING WELL LOCATION, GROUNDWATER GRADIENT, ETC.; AND,
- 2) SITE COMMENTS WORTHY OF NOTICE (E.G., AREA OF RESIDUAL POLLUTION LEFT IN PLACE, DEED NOTICES ETC.)

On April 10, 1995, one above ground storage tank and one sump were removed from the subject site. The exposed soil surface was visibly contaminated with petroleum product. Gene L. Failing & Son excavated the visibly contaminated soils on April 14, 1995 and sampled the soils. Results of composite soil samples taken from stockpiled soil showed extremely low levels of pollution, with the exception of one sample which detected total petroleum hydrocarbons as oil and grease (TPH-oil) at 4600 parts per million (ppm).

Approximately 20 cubic yards of contaminated soil was excavated and three confirmatory soil samples were analyzed for TPH as gas, TPH as diesel, benzene, toluene, ethylbenzene and xylene (BTEX). All samples showed non detect levels of contamination.

Confirmatory sampling below excavation indicate non detect for TPH and BTEX. Since the confirmatory soil samples found non detect levels of pollution, it appears that the TPH-oil pollution related to the former tank was localized and that adequate source removal has been accomplished.

Considering that there were no visible holes when the above ground storage tank was removed and that confirmatory samples were non detect for contaminants of concern, it appears that any release which may have occurred in connection with the former tank does not pose a threat to water quality.

This document and the related CASE CLOSURE LETTER, shall be retained by the lead agency as part of the official site file.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

NUMBER 18824829

EXHIBIT "A"

All that certain real property situate in the City of Campbell, County of Santa Clara, State of California, described as follow.

PARCEL 1

Being all of that land described as Parcel Two and Parcel Three in that Individual Grant Deed Recorded April 4 1984 in Book I430 of Official Records at Page 711 and a portion of Lot 13 as shown on that certain Map of Tract No. 7823 filed for record in the office of the Recorder of the County of Santa Clara, State of California on July 25, 1986, in Book 562 of Maps at Pages 52 & 53, more particularly described as follows:

Beginning at the southwesterly corner of Parcel 1 as shown on that certain Parcel Map filed for record in the office of the Recorder of the County of Santa Clara, State of California on February 10, 1989 in Book 596 of Maps at Page 10;

Thence along the southerly line of said Parcel 1 and said Lot 13 the following two (2) courses;

1. North 57°57'17" East (North 57°57'50" East), 39.90 feet;
2. North 75°24'25" East (North 75°24'58" East), 246.18 feet to the True Point of Beginning of Parcel 1;

Thence leaving said southerly line of Lot 13 and continuing along the following three (3) courses;

1. North 14°35'35" West, 300.30 feet;
2. North 75°24'25" East, 2.36 feet;
3. North 14°35'35" West, 34.95 feet to a point on the southerly line of East McGlinchy Lane, being a point on a curve concave southeasterly, having a radius of 370.00 feet, to which a radial line bears North 18°21'49" West;

Thence along the southerly line of East McGlinchy Lane the following five (5) courses;

1. Along said curve having a radius of 370.00 feet, through a central angle of 5°15'29" for an arc distance of 33.96 feet;
2. North 76°53'40" East, 73.63 (73.80) feet;
3. Along a tangent curve to the right having a radius of 290.00 feet, through a central angle of 17°20'00" for an arc distance of 87.73 feet;
4. South 85°46'20" East, 184.14 feet to the Easterly line of said Parcel Three as described in said individual Grant Deed;

PARCEL 1 CONTINUED

Thence leaving said southerly line of East McGlincy Lane South $00^{\circ}06'01''$ East (South $00^{\circ}08'$ East)(South $00^{\circ}06'10''$ East), 248.72 feet along the easterly line of said Parcel Three as described in said individual Grant Deed to a point on the easterly line of said Lot 13;

Thence South $18^{\circ}08'50''$ East, 18.43 feet along said easterly line of Lot 13 to the southeasterly corner thereof;

Thence along the southerly line of said Lot 13 South $75^{\circ}24'25''$ West (South $75^{\circ}24'58''$ West), 309.13 feet to the True Point of Beginning.

PARCEL 2

Being a portion of Lot 13 as shown on that certain Map of Tract No. 7823 filed for record in the office of the Recorder of the County of Santa Clara, State of California on July 25, 1986, in Book 562 of Maps at Pages 52 & 53 and a portion of Parcel 1, as shown on that certain Parcel Map filed for record in the Office of the Recorder of the County of Santa Clara, State of California on February 10, 1989 in Book 596 of Maps at Page 10;

Beginning at the southwesterly corner of said Parcel 1;

Thence along the southwesterly line of said Parcel 1 the following two (2) courses.

1. North $22^{\circ}36'39''$ West, 168.37 (168.35) feet;
2. North $44^{\circ}55'38''$ West, 86.82 (86.79) feet to a point on the southerly line of East McGlincy Lane;

Thence along said southerly line North $56^{\circ}55'00''$ East, 213.07 feet;

Thence leaving said southerly line of East McGlincy Lane along the following three (3) courses;

PARCEL 2 CONTINUED

1. South 33°05'33" East, 15.20 feet;
2. South 14°35'35" East, 38.85 feet;
3. North 75°24'25" East, 4.33 feet;
4. South 14°35'35" East, 244.00 feet to a point on the southerly line of said Parcel 1;

Thence along the southerly line of said Parcel 1 the following two (2) courses;

1. South 75°24'25" West (South 75°24'58" West), 105.84 feet;
2. South 57°57'17" West (South 57°57'50" West), 39.90 feet to the True Point of Beginning.

EXHIBIT "B" TO GRANT DEED

SUBJECT TO THE DECLARATION OF COVENANTS AND RESTRICTIONS RECORDED ~~3-17-06~~ INSTRUMENT NO. 18848321, OFFICIAL RECORDS OF THE COUNTY OF SANTA CLARA OF THE STATE OF CALIFORNIA, AND ANY AND ALL AMENDMENTS, MODIFICATIONS AND SUPPLEMENTS THERETO AS THOUGH FULLY SET FORTH HEREIN.

Re: **PHASE I ENVIRONMENTAL SITE ASSESSMENT UPDATE**
680-750 East McGlincy Lane, Campbell, California
ERAS Project Number 08103

Dear Mr. Chalmers,

ERAS Environmental (ERAS) is pleased to provide you with the attached Phase I Environmental Site Assessment (ESA) Update for the above referenced Property. The previous Phase 1 ESA was completed by ERAS on April 13, 2005 and was previously updated by ERAS on July 5, 2006; July 13, 2007; and March 6, 2008. This assessment includes a visual reconnaissance of the Property, a review of environmental databases for nearby sites, a review of regulatory agency files, and an interview with the owner of the Property. At the time of this update, the Property was occupied by Instant Storage Service Container Sales and Service and McGlincy Business Center. If you have any questions regarding the information in this report, please don't hesitate to call us. It has been a pleasure working with you on this project.

Sincerely,
ERAS Environmental, Inc.

David Siegel, REA II 20200
Senior Program Manager

Andrew Savage
Project Geologist

Attachments:

- 1) Site Assessment Checklist and ASTM Transaction Screen And Site Assessment Questionnaire
- 2) FSTC Environmental Firstsearch Report
- 3) Closure Documentation for 580 East McGlincy Lane
- 4) Environmental Professional's Certifications

The ESA Update project was performed to identify, to the extent feasible, *recognized environmental conditions* in connection with the Property. The protocol utilized for this ESA is in general accordance with the requirements of American Society of Testing Materials (ASTM) Standard E1527-05.

Scope of Work

The ESA Update included a review of a previous Phase 1 Environmental Site Assessment (ESA) and previous ESA updates, a visual reconnaissance of the Property, a review of building department records, a review of a regulatory agency environmental database for the Property and surrounding area provided by FirstSearch Technology Corporation (FSTC) and an interview with the owner of the Property. Conclusions and recommendations presented in our report were based upon information gathered by completing these tasks.

Previous Environmental Assessment

A previous ESA project was performed by ERAS. The results of the ESA were presented in a report entitled Phase 1 Environmental Site Assessment, 680-750 East McGlincy Lane, Campbell, California, dated April 13, 2005. At the time of the site assessment, the Property was occupied by Instant Storage Service, Bay Area Recycling, and a residence. ERAS noted no leaks, spills or unauthorized releases of hazardous materials on the Property. A review of building and fire department inspection records did not identify any leaks, spills or unauthorized releases of hazardous materials.

ERAS concluded there was no information that current or past uses of the Property could have caused environmental contamination to subsurface soil or groundwater. There were no off-site sources of contamination identified that were considered to pose a threat to subsurface environmental conditions under the Property. ERAS recommended that no further work be performed regarding the current status of subsurface environmental conditions at the Property, at the time of this previous assessment.

There were no observed changes to the Property that would affect environmental conditions based on the work performed for the updates to the ESA in 2006, 2007, and March of 2008.

Visual Reconnaissance

An ERAS representative visited the Property on September 3, 2008. The subject property (hereinafter the "Property") is located at 680-750 East McGlincy Lane, on the south side of East McGlincy Lane between Winchester Drive and Union Avenue in the eastern portion of the City of Campbell. Highway 17 is located approximately 2/5 mile to the west, and downtown Campbell is located approximately 3/4 mile to the northwest.

The Property is located in an area of industrial, warehouse, and residential land uses. The Property was partially occupied by Instant Storage Service (ISS) at the time of the site visit. The other portion of the Property was occupied by McGlincy Business Center (industrial condominiums), which was partially vacant at the time of the site visit. Seventeen of the condominium units were occupied.

The occupants were the following:

- real estate company
- computer repair company
- certified personal account
- asbestos removal contractor
- ISS business office
- kitchen and bath remodel company
- insurance company
- home theater installation company
- repossession company
- commercial painting company
- wholesale bakery
- construction company
- window and door company (three units)
- fitness center
- flooring company.

To the north of the Property was East McGlincy Lane and on the other side of the street was the following:

- 625 East McGlincy Lane (El Gato Auto Upholstery)
- 645 East McGlincy Lane (vacant)
- 655 East McGlincy Lane (Best Buy Auto Glass, Sterling Marble & Granite, and Zexton

Numerical Control)

- 665 East McGlincy Lane (Modern Bench Operations)
- 695 East McGlincy Lane (Lambert Floors and R.K. Berrett Construction)
- 715 East McGlincy Lane (Precision Machining Inc.)
- 745 East McGlincy Lane (J&M Window and Glass)
- 765 East McGlincy Lane (Sunbeam)
- 781 East McGlincy Lane (Hogan Stained Glass and Artcraft Welding Inc.).

To the east of the Property was Becky's Shoes at 786 East McGlincy Lane, to the south was residential development, and to the west was West Valley Construction Company at 580 McGlincy Lane.

The portion of the Property occupied by ISS contains a large number of sea/land type metal storage containers arranged in rows and stacks on the Property and one shop building. The portion of the Property occupied by McGlincy Business Center contains two concrete tilt-up condominium buildings, asphalt paved parking areas, landscaping, and trash enclosures.

The ISS shop building was constructed of a wood frame with metal siding and roof, on a concrete pad. Approximately 9 compressed gas cylinders used for welding (argon, helium, argon/CO₂, oxygen, and acetylene) were present in the shop. No leaks or spills were noted in the vicinity of these chemicals.

The two concrete tilt up condominium buildings contained approximately twelve units each. Some of the units contained only office space and some contained office and warehouse space. The office space was finished with sheetrock walls, carpet, linoleum, and tile floors, and suspended acoustic ceilings. The warehouse space was finished with sheetrock walls, concrete floors, and open frame ceilings. The only condominiums which contained hazardous materials was Unit 104 in Building A which was occupied by Proformance Paint Inc. the commercial painter, Unit 103 in Building A, which was occupied by All Floors, Unit 107 in Building B which was occupied by Versatronics (computer repair), and Unit 100-102 which was occupied by Murray Window and Door.

Unit 104 contained containers of various stains, paints, varnishes, and other chemicals associated with commercial painting. Unit 103 contained containers of flooring adhesive. Unit 100-102 contained containers of paint, WD40, spray paint, and propane for the forklift. Unit 107 contained containers of gasoline, alcohol, and oil. All containers of chemicals observed were of retail size (5-gallons or less) and no leaks or spills were observed in the vicinity of these chemicals.

Dry wells, pits or sumps were not observed on the Property by ERAS. No evidence of underground storage tanks (UST) or above ground storage tanks (AST) were observed on the Property by ERAS. No evidence of significant leakage, spillage or dumping of regulated material was observed on the Property by ERAS.

Observations made by ERAS at the time of the site visit are included on the ASTM Site Reconnaissance and Interview form also included in Attachment 1

Database Review

Information from standard Federal and State environmental databases was provided to ERAS by Environmental FirstSearch Technology Corporation (FSTC)) of California. Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance matching of street addresses. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geo-coded locations is +/- 300 feet.

The complete database is included as Attachment 2 to this report. Leaks from underground storage tank (Leaking UST or LUST) sites are the most common source of local contamination. Leaks of this type generally do not extend down-gradient more than approximately 600 feet (approximately 1/8 mile) except under unusual conditions.

The environmental database search identified one State site within 1 mile of the Property. Forty four (44) Leaking UST sites and one Cerclis site were identified within 1/2 mile of the Property. Seven RCRA Generator sites, thirteen (13) Permits sites, and six registered UST/AST sites were located within 1/4 mile of the Property. Two RCRA NLR sites, one ERNS site, and one Spills-1990 site were located within 1/8 mile of the Property. The locations of these sites are indicated on the 1

Mile Radius, .5 Mile Radius and .25 Mile Radius maps in the database report in Attachment 2.

Groundwater is the medium that has the potential to carry contaminants from an off-site source to the Property. The regional groundwater flow follows the topography, moving from areas of higher elevation to areas of lower elevation. The groundwater flow direction in the area of the Property is estimated to be toward the north.

One of the units associated with the Property, Proformance Painting Inc. in Unit 103 was identified on the Permits database. The file for this facility was requested from the Santa Clara County Hazardous Materials Compliance Division (SCCHMCD). No records were available. Based on the lack of records and visual observation of the facility this Unit is not considered likely to pose a threat to the subsurface environmental conditions beneath the Property.

An adjacent site, located to the west of the Property, West Valley Construction Company., Inc. at 580 East McGlincy Lane was listed as a closed LUST, small quantity RCRA generator, a Permits site, and a UST site. The file for this site had previously been reviewed by ERAS on April 12, 2005 and was reviewed again on September 3, 2008 at the SCCHMCD. The former location of the leaking USTs on this site was not in close proximity to the Property or in an up-gradient direction. The site has been remediated and confirmation soil samples did not indicate detectable concentrations of petroleum hydrocarbons or fuel oxygenates remaining on the site. This leak case was closed by the SCVWD.

Based on the distance to the former USTs, cross-gradient location, case- status and confirmation soil sample analytical results, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property. The case closure documentation is included as Attachment 3.

The file for two other adjacent sites, 665 East McGlincy and 715 McGlincy, were reviewed on September 3rd 2008 as well at the SCCHMCD based on their listings on the RCRA Generator database. No records were observed indicating that any leaks or spills have occurred at either of these facilities. Based on the records reviewed these sited are considered unlikely to pose a threat to the subsurface environmental conditions at the Property

None of the other identified sites are located in close proximity or in a direction up gradient from the Property, therefore none are considered likely to pose a threat to subsurface environmental conditions beneath the Property.

Interview

ERAS reviewed an ASTM Standard Environmental Site Assessment Questionnaire completed by the owner, Mr. James S. Chalmers in August of 2008. According to Mr. Chalmers, the Property was used for farming from the early 1900's to 1978. The Property was then used as storage by West Valley Construction from 1960's to 1985 and was then used for storage and a house hold recycling depot from 1978 to 2005 by the Chalmers family.

Mr. Chalmers indicated that he was not aware of any contamination on the Property from the previous uses. Mr. Chalmers was not aware of; 1) the existence of environmental liens on the Property; 2) any notifications by government of violations of current historic environmental laws; 3) any current violations by past or current occupants of environmental laws, or 4) the current or historic presence of underground or aboveground storage tanks on the Property.

Mr. Chalmers's responses were compiled on ERAS Environmental Questionnaire along with observations made by ERAS at the time of the site visit. These were included on the ASTM Site Reconnaissance and Interview form included as Attachment 1.

Historical Records Review

Review of records from the City of Campbell Building Department were included in the ERAS (2005) ESA report, ERAS (2006) ESA Update report, and ERAS (March 2008) ESA Update report. Records were reviewed for the Property at the City of Campbell Building Department on September 3, 2008.

The only new records available since the last ESA Update performed by ERAS dated March 12, 2008 was one permit to establish a new occupant in one of the condominium units.

Conclusions

ERAS has performed a Phase I Environmental Site Assessment Update in conformance with the scope and limitations of ASTM Practice E1527-05 of the Property. Any exceptions to, or deletions from this Practice are described in this section of the report.

No data failures occurred between the early 1900's and the present.

An ERAS representative visited the Property on September 3, 2008. The subject property (hereinafter the "Property") is located at 680-750 East McGlincy Lane, on the south side of East McGlincy Lane between Winchester Drive and Union Avenue in the eastern portion of the City of Campbell. Highway 17 is located approximately 2/5 mile to the west, and downtown Campbell is located approximately 3/4 mile to the northwest.

The Property is located in an area of industrial, warehouse, and residential land uses. The Property was partially occupied by Instant Storage Service (ISS) at the time of the site visit. The other portion of the Property was occupied by McGlincy Business Center (industrial condominiums), which was partially vacant at the time of the site visit. Seventeen of the condominium units were occupied. company, a window and door company (three units), a fitness center, a flooring company.

To the north of the Property was East McGlincy Lane and on the other side of the street was El Gato Auto Upholstery, Best Buy Auto Glass, Sterling Marble & Granite, and Zexton Numerical Control, Modern Bench Operations, Lambert Floors and R.K. Berrett Construction, Precision Machining Inc., J&M Window and Glass, Sunbeam and Hogan Stained Glass and Artcraft Welding Inc.. To the east of the Property was Becky's Shoes, to the south was residential development, and to the west was West Valley Construction Company.

The portion of the Property occupied by ISS contains a large number of sea/land type metal storage containers arranged in rows and stacks on the Property and one shop building. The portion of the Property occupied by McGlincy Business Center contains two concrete tilt-up condominium buildings, asphalt paved parking areas, landscaping, and trash enclosures.

The ISS shop building was constructed of a wood frame with metal siding and roof, on a concrete pad. Approximately 9 compressed gas cylinders used for welding (argon, helium, argon/CO₂, oxygen, and acetylene) were present in the shop. No leaks or spills were noted in the vicinity of these chemicals.

The two concrete tilt up condominium buildings contained approximately twelve units each. Some of the units contained only office space and some contained office and warehouse space. The only condominiums which contained hazardous materials was Unit 104 in Building A which was occupied by Proformance Paint Inc. the commercial painter, Unit 103 in Building A, which was occupied by All Floors, Unit 107 in Building B which was occupied by Versatronics (computer repair), and Unit 100-102 which was occupied by Murray Window and Door.

Unit 104 contained containers of various stains, paints, varnishes, and other chemicals associated with commercial painting. Unit 103 contained containers of flooring adhesive. Unit 100-102 contained containers of paint, WD40, spray paint, and propane for the forklift. Unit 107 contained containers of gasoline, alcohol, and oil. All containers of chemicals observed were of retail size (5-gallons or less) and no leaks or spills were observed in the vicinity of these chemicals.

Drywells, pits or sumps were not observed on the Property by ERAS. No evidence of underground storage tanks (UST) or above ground storage tanks (AST) were observed on the Property by ERAS. No evidence of significant leakage, spillage or dumping of regulated material was observed on the Property by ERAS.

Historical information from the previous ESA and this update report indicates that the Property was used for an orchard/farming with one or two buildings, from the early 1900's through 1978. From the 1960's through 1985 the Property was used by West Valley Construction for storage, and then from 1978 through 2005 the Property was used as storage and a household recycling depot by the Chalmers family. The Property is currently occupied by a storage space rental company and since 2006 has been occupied by two industrial condominium buildings (McGlincy Business Center).

ERAS reviewed information since ERAS previous Phase 1 project and ESA Update and determined that the only change to the Property was the addition of the two condominium buildings and that no significant changes had been made which would indicate a recognized environmental condition since the time of the previous ERAS reports (2005, 2006, and March of 2008).

The environmental database search identified forty four (44) Leaking UST sites and one Cerclis site within ½ mile of the Property. Seven RCRA Generator sites, thirteen (13) Permits sites, and six registered UST/AST sites were located within ¼ mile of the Property. Two RCRA NLR sites, one

ERNS site, and one Spills-1990 site were located within 1/8 mile of the Property.

One of the units associated with the Property, Proformance Painting Inc. in Unit 103 was identified on the Permits database. The file for this facility was requested from the Santa Clara County Hazardous Materials Compliance Division (SCCHMCD). No records were available. Based on the lack of records and visual observation of the facility this Unit is not considered likely to pose a threat to the subsurface environmental conditions beneath the Property.

One adjacent site, West Valley Construction Company., Inc., at 580 East McGlincy Lane was listed as a closed LUST, small quantity RCRA generator, and a UST site located to the west of the Property.

The file for two other adjacent sites, 665 East McGlincy and 715 McGlincy, were reviewed as well on September 3rd 2008 at the SCCHMCD based on there listings on the RCRA Generator database. No records were observed indicating that any leaks or spills have occurred at either of these facilities. Based on the records reviewed these sited are considered unlikely to pose a threat to the subsurface environmental conditions at the Property.

None of the other identified sites are located in close proximity or in a direction up gradient from the Property, therefore none are considered likely to pose a threat to subsurface environmental conditions beneath the Property.

Recommendations

No evidence was discovered during this ESA Update to indicate that activities currently or historically conducted on or near the Property have contributed fuel or solvent contamination to soil or groundwater in the surrounding area. Recognized environmental conditions were not identified for soil or groundwater conditions at the Property. ERAS recommends that no further work be performed regarding the current status of subsurface environmental conditions at the Property, identified as 680-750 East McGlincy Lane in Campbell, California.

Limitations

ERAS has performed the services for this project in accordance with current standards of the American Society for Testing and Materials (ASTM) for Environmental Site Assessments (ASTM standard E1527-05).

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of this part. Copies of the assessors resume and license are included as Attachment 3. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

ERAS determined that a search for environmental liens would not be likely to add additional information for this assessment due to the unchanged use of the Property. ERAS had previously

reviewed Santa Clara County Records Office files for the Property and for the owner as part of an addendum to the ESA Update (2007). No environmental liens were listed under either the Property APN numbers or under the owner's name.

No guarantees are either expressed or implied. ERAS is not responsible for errors or omissions in the information supplied by the commercial database company. *Reasonably ascertainable* information was reviewed for this project. Reasonably ascertainable information is publicly available and obtainable within reasonable time and cost constraints, and reasonably reviewable.

The investigation was limited to a search for *recognized environmental conditions*. The term *recognized environmental condition* means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

There is no investigation, which is thorough enough to preclude the presence of hazardous materials, which presently, or in the future, may be considered hazardous at the Property. Because regulatory evaluation criteria are constantly changing, concentrations of constituents presently considered low may, in the future, fall under more stringent regulatory standards that require remediation.

ERAS is not responsible for errors or omissions by the laboratory on which many of the conclusions made herein are based.

The visual reconnaissance was limited to visual observation of surface conditions at the Property. This approach reflects current ASTM standards unless the information obtained as part of this work suggests the need for further investigation. The investigation addresses recognized environmental conditions at the Property. However, certain conditions, such as those listed below, may not be revealed:

- 1) naturally occurring toxic materials in the subsurface soils, rocks, water or toxicity of on-site flora;
- 2) toxicity of substances common in current habitable environments, such as stored household products, building materials, and consumables;
- 3) biological pathogens;
- 4) contaminant plume below sampled or observed surface levels, originating from remote source;
- 5) constituents or constituent concentrations that do not violate present regulatory standards, but may violate future standards;

- 6) unknown site impact, such as "midnight" dumping and/or accidental spillage which may occur following the visual reconnaissance of the Property by ERAS.

Opinions and judgments expressed herein, which are based on our understanding and interpretation of current regulatory standards, should not be construed as legal opinions.

It has been a pleasure working with you on this project. Please call if you have any questions.

Re: **PHASE I ENVIRONMENTAL SITE ASSESSMENT**
680 - 750 East McGlincey Lane, Campbell, California
ERAS Project Number 05040

Dear Mr. Chalmers:

ERAS Environmental (ERAS) is pleased to provide you with the attached Phase I Environmental Site Assessment (ESA) for the above referenced Property. The assessment included a visual reconnaissance of the Property, a review of historical maps and aerial photographs, a review of environmental databases for nearby sites, an interview with an owner of the Property, a review of Building and Fire Department records for the Property and a review of Santa Clara Valley Water District records for a nearby leak site. Conclusions and recommendations presented in our report were based upon the completion of these activities. The Property was occupied by Instant Storage Service, Bay Area Recycling and a residence at the time of the site visit.

If you have any questions regarding the information in this report, please don't hesitate to call us. It has been a pleasure working with you on this project.

Sincerely,
ERAS Environmental, Inc.

W. Skip McIntosh
Staff Geologist

1.0 INTRODUCTION

1.1 Purpose and Scope

This Phase I Environmental Site Assessment (ESA) was performed to identify, to the extent feasible, recognized environmental conditions in connection with the subject site (cited hereinafter as the "Property"). The protocol utilized for this assessment is in general accordance with the requirements of ASTM Standard E 1527-00.

The assessment included four main components: Records Review, Historical Use Information Review, Visual Reconnaissance of the Property and Interviews, and Report Preparation. The purpose of the records review is to obtain and review records that will help identify recognized environmental conditions in connection with the Property. The objective of the visual reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the Property. The objective of the interviews is to obtain additional information indicating recognized environmental conditions in connection with the Property. The report includes documentation to support the analysis, opinions and conclusions as presented.

1.2 Authorization

Authorization to perform this assessment was provided by Mr. Jim Chalmers on March 29, 2005 in response to ERAS proposal dated March 25, 2005.

1.3 Limitations and Exceptions

ERAS has performed the services for this project in accordance with our proposal, and in accordance with current standards of the American Society for Testing and Materials (ASTM) for Phase I Environmental Site Assessments (ASTM standard E1527-00). No guarantees are either expressed or implied.

The investigation was limited to a search for *recognized environmental conditions*. The term *recognized environmental condition* means the presence or likely presence of any hazardous substances or petroleum products on the Property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the Property or into the ground, groundwater, or surface water of the Property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

There is no investigation, which is thorough enough to preclude the presence of hazardous materials, which presently, or in the future, may be considered hazardous at the Property. Because regulatory evaluation criteria are constantly changing, concentrations of constituents presently considered low may, in the future, fall under more stringent regulatory standards that require remediation.

The visual reconnaissance was limited to observation of surface conditions at the Property. *Reasonably ascertainable* information was obtained. This information is publicly available and obtainable from its source within reasonable time and cost constraints, and is reasonably reviewable. This approach reflects current ASTM standards unless the information obtained as part of this work suggests the need for further investigation. No warranty or guarantee of Property conditions is intended.

The investigation addressed recognized environmental conditions at the Property. However, certain conditions, such as those listed below, may not be revealed:

- 1) naturally occurring toxic materials in the subsurface soils, rocks, water or toxicity of on site-flora;
- 2) toxicity of substances common in current habitable environments, such as stored household products, building materials, and consumables;
- 3) biological pathogens;
- 4) contaminant plumes below sampled or observed surface levels, originating from a remote source;
- 5) constituents or constituent concentrations that do not violate present regulatory standards, but may violate future standards;
- 6) unknown impact to the Property, such as "midnight" dumping and/or accidental spillage which may occur following the visual reconnaissance of the Property by ERAS.

Opinions and judgments expressed herein, which are based upon our understanding and interpretation of current regulatory standards, should not be construed as legal opinions.

2.0 PROPERTY DESCRIPTION

2.1 Location and Jurisdiction

The subject property (hereinafter the "Property") is located at 680 - 750 East McGlincey Lane on the south side of East McGlincey lane between Winchester Drive and Union Avenue in the eastern portion of the City of Campbell. Highway 17 is located approximately 2/5 mile to the west, and downtown Campbell is located approximately 3/4 mile to the northwest. The Overview Map included as a site location map in **Appendix A** shows the location of the Property. Current photographs showing important details of the Property are included in **Appendix B**.

2.2 Property Description

An ERAS representative visited the Property on January 4, 2005. The Property is located in an area of industrial, warehouse and residential commercial land uses. The Property was occupied by Instant Storage Service (ISS) and Bay Area Recycling Center (BARC) and residences at the time of the site visit. The adjacent sites were used for West Valley Construction Company, an office and outdoor storage yard, Beck's Shoes, a warehouse and office and residences.

The Property contains a large number of sea/land type metal storage containers arranged in rows and stacks on dirt and asphalt paved portions of the Property, two storage buildings and an office building for ISS. Several buildings, metal storage and transport bins and semi trailers on the Property were associated with the BARC operations. Two residential buildings were also located on the Property. An overhead power transmission line was located along the eastern side of the Property. The areas in the vicinity of the ISS office and BARC buildings was paved with asphalt and concrete.

The ISS storage buildings were constructed of wood frame and wood siding materials with wooden roofs and concrete floors. These buildings were rented for equipment and materials storage. The ISS office building was constructed from metal storage containers. The interior was finished with wood paneled walls, suspended acoustic ceilings and vinyl tile floors. No indications of hazardous material storage were noted in these buildings at the time of the site visit.

The BARC buildings were constructed of a variety of materials. A recyclable materials weighing and sorting building was constructed of wood frame and wood siding with a sheet metal roof, on a concrete pad. A shop and storage room building was constructed of wood frame with metal siding and roof, on a concrete pad. A storage building was constructed of concrete block walls with a wooden roof and concrete pad. The ground surface between these buildings was paved with asphalt or concrete. Hydraulic equipment for crushing and baling recyclable materials and conveyor belts were located in and adjacent to the storage buildings. No indications of spills or leaks of hazardous materials were noted in the vicinity of this equipment.

The BARC shop building contained a welding shop space, a woodworking space, storage

racks and open warehouse space. Approximately nine compressed gas cylinders were noted to be properly stored in the shop area. The gasses included acetylene, argon and oxygen. A forklift with an LP gas cylinder was also stored in this area. Small quantities of spray lubricants were stored in the shop. No indications of leaks or spills were noted in this area.

The residence at 750 McGlincey Lane was of wood frame construction with stucco, constructed on a concrete foundation with a narrow crawl space. The interior was finished with lath and plaster and textured sheetrock walls. The floors were wood, carpeted or sheetrock covered. No indication of leaks or spills of hazardous materials was noted at the time of the site visit. A second smaller residence, of wood frame construction with wood siding and a wooden roof, on a concrete pad was not accessible at the time of the site visit.

The Property was reported by Mr. Jim Chalmers to contain a septic system to serve the residences.

Drywells, pits or sumps were not observed on the Property by ERAS. One propane aboveground storage tank (AST) was noted on the Property. No evidence of underground storage tanks (UST) was observed on the Property by ERAS. No evidence of significant leakage, spillage or dumping of regulated material was observed on the Property by ERAS.

A Site Plan (**Figure 2**) illustrating important features of the Property is included in **Appendix A**. Observations made by ERAS at the time of the site visit are shown on the site reconnaissance checklist in **Appendix D**.

2.3 Property Use

The Property was occupied by ISS, a storage space rental operation, and BARC a recycling operation, and by two residences at the time of the site visit. The Property was used for an orchard with one or two buildings, from prior to 1942 through at least 1968. Between 1968 and 1973, the orchards were removed and four structures were located on the Property. The Property has been used for a recycling center and storage space rental from the 1970's. See additional information in **Section 4.0, Historical Use Information**.

2.4 Suspect ACM/PCBs/Lead Paint/Lead in Drinking Water

Asbestos

Based on the approximate construction dates of the building it is possible that there are asbestos containing materials (ACM) present. All of the materials observed were in good condition.

ACM may become a hazard if the materials are disturbed during demolition, renovation or remodeling activities. All materials suspected to contain asbestos should be sampled and analyzed prior to activities that could damage them.

PCBs

No transformers were noted on the Property. A utility pole mounted transformer was located on the adjacent site (879 McGlincey Lane). There was no indication of leaks or spills in the vicinity of this transformer at the time of the site visit. There was no indication that PCB containing equipment was used on the Property.

Lead Paint

Based on the approximate construction date of the building, it is possible that the Property contains lead-based paint. Painted surfaces observed were noted to be in generally good condition at the time of the site visit.

Lead in Drinking Water

A survey of the building for lead in drinking water was not requested in the Scope of Work for this assessment.

2.5 Physical Setting

The subject property is in the eastern part of the city of Campbell, in the San Francisco Bay Area. The San Francisco Bay Area occupies a broad alluvial valley that slopes gently northward toward San Francisco Bay and is flanked by alluvial fans deposited at the foot of the Diablo Range to the east and the Santa Cruz Mountains to the west. The northern part of the valley is called the Santa Clara Valley. Surface topography in the immediate vicinity of the Property is almost flat. The surface of the Property slopes very gently down to the south. Elevation of the Property is approximately 220 feet above MSL, according to the United States Geological Survey (USGS) San Jose West 7.5 Minute Series Topographic Map. The topography in the region of the Property slopes gently to the north toward San Francisco Bay and west toward Los Gatos Creek.

2.6 Geologic and Soil Conditions

The Property is underlain by alluvial sediments that have been derived from the nearby upland surfaces and were deposited in a series of coalescing alluvial fans. The sediments underlying this part of the Santa Clara Valley are divided into two units, based upon age (California Department of Water Resources, 1967). The younger alluvium is of Holocene to Pleistocene age and is composed primarily of unconsolidated sands, gravels, silts and clays and is up to 200 feet thick.

Thick deposits of coarse grained alluvial deposits are found in the vicinity. The Property is likely underlain by near surface clayey soils with coarse grained sands and gravels occurring to a depth of several hundred feet. Below the younger alluvium is the less permeable Santa Clara Formation, of Pleistocene age. The Santa Clara Formation is composed of poorly sorted and irregularly bedded gravels, silts, sands and clays. This unit is underlain by Franciscan basement rock of Cretaceous to Jurassic age.

2.7 Groundwater Conditions

The Property is located near the western edge of an area known as the West Side Alluvial Apron which is a subarea of the Santa Clara Valley Groundwater Basin (California

Department of Water Resources, 1967). The West Side Alluvial Apron is the most important recharge zone along the western side of the Santa Clara Groundwater Basin. The total thickness of alluvium in this subarea ranges from approximately 500 to 1,000 feet. However, the western margin is underlain at fairly shallow depth by the Santa Clara Formation. The permeability of the alluvium consists of the high values found in the alluvium of the adjacent San Jose subarea to the low values of the Santa Clara Formation. The aquifer content of the alluvium decreases with depth. The upper 100 to 200 feet of alluvium is generally very permeable because it consists almost entirely of gravels.

The regional groundwater flow follows the topography, moving from areas of higher elevation to areas of lower elevation. The regional groundwater flow direction is estimated to be toward the north toward the San Francisco Bay.

3.0 REGULATORY AGENCY RECORDS REVIEW

3.1 Standard Federal and State Environmental Record Sources

Groundwater provides the primary migration route for subsurface contamination from off-site sources to the Property. The regional direction of groundwater flow in the area of the Property has been measured to be to the north.

Only the sites that are directly up-gradient or in close proximity (adjacent) are usually considered to pose a threat to subsurface environmental conditions under the Property. The potential impact of off-site contaminants to the Property are based on the type of chemical released, the severity of the release, status of remediation or cleanup, and nature of the groundwater in the area of impact and area of the Property.

Sites where groundwater is known to be impacted are listed on a variety of Federal and State databases and are the cases most likely to affect other nearby parcels. These databases include the National Priority List (NPL), Superfund (CERCLIS) and Hazardous Waste Sites (HAZNET) lists. Sites that have caused groundwater contamination from fuel (petroleum) leaks and solvent leaks are reported on the Leaking Underground Storage Tank List (LUST).

Fuel hydrocarbons generally do not migrate as readily as other chemicals such as certain solvents; consequently, reported fuel leak sites at distances greater than ½ mile from the Property are not considered imminent threats and are not plotted on database maps. Leaks from underground storage tank sites are the most common source of local contamination. Leaks of this type generally do not extend down-gradient more than approximately 500 feet (approximately 1/10 mile) except under unusual conditions. All toxic sites within a 1 mile radius are plotted and reviewed to determine potential threats to the Property.

Databases searched for specified radii around the Property also include listed facilities that treat, store, transfer or dispose of hazardous waste (RCRIS-TSD), large (RCRIS-LG) and small (RCRIS-SG) generators of hazardous waste, reported spills of hazardous materials (ERNS, TRIS, CHMIRS), and facilities containing registered underground storage tanks (UST). Other significant databases searched include historical UST sites (HIST UST) and dry cleaning establishments (CLEANERS).

Information from standard Federal and State environmental databases was provided to ERAS by the owner in the form of a database compiled by Environmental Data Resources, Inc. (EDR) of Southport, Connecticut. Data from governmental agency lists are updated and integrated into one database which is updated as these data are released. This integrated database also contains postal service data in order to enhance matching of street addresses. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geo-coded locations is +/- 300 feet.

Note that based on the large number of sites in the nearby area and the location and nature of the leak sites, only sites within approximately ½ mile were considered significant. Only these sites were included in **Appendix C**. Maps in the EDR report show the locations of all sites identified relative to the location of the Property. The Property is indicated as TP (Target Property) on the database.

3.2 Findings From Database Review

The Property was not identified in the any of the databases searched for this assessment.

An adjacent site, West Valley Construction Company, Inc., (West Valley) at 580 East McGlincey Lane, located at the western side of the Property, was listed as a LUST, Cortese, UST, HIST UST, Haznet, FINDS and RCRA-SQG site.

The West Valley site is listed as a result of former fuel USTs. The USTs were removed in 1998 and petroleum impacted soil was over excavated and disposed. The LUST case was closed based on soil confirmation sample analytical results which did not detect concentrations of petroleum hydrocarbons or fuel oxygenates above the ESLs. The former UST location was several hundred feet southwest of the Property, in a cross-gradient direction. Based on the closed case status and cross-gradient location of the former USTs, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

A summary of the findings from the EDR environmental database search is provided on the following pages. The summary is presented in the order of the database listing on **Page #1** of the EDR report.

The locations of the other identified sites, relative to the Property, are shown on the **Overview Map** and **Detail Map** at the end of the EDR Report in **Appendix C**.

Federal Lists

Federal NPL and Proposed NPL Listings

The National Priorities (Superfund) List is the federal EPA database of uncontrolled or abandoned hazardous waste sites identified, or proposed, for priority remedial actions under the Superfund Program.

- No NPL or proposed NPL sites were identified within 1 mile of the Property.

Federal CERCLIS Listing

The EPA maintains a database of potentially hazardous waste sites that have been reported to the US EPA by states, municipalities, private companies and private persons. CERCLIS contains sites which are either proposed or on the NPL list and sites which are in the screening and assessment phase for possible inclusion on the NPL.

- No CERCLIS sites were identified within ½ mile of the Property

Federal CERCLIS/NFRAP Listing

This list is a compilation of sites which the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances. Sites in the NFRAP database may be locations where, following initial investigations, contamination was removed or determined to be not serious enough to require Superfund consideration.

- No CERCLIS/NFRAP sites were identified within ¼ mile of the Property.

Federal CORRACTS Listing

The EPA maintains this database of sites that have been subject to a corrective action order under the Resource Conservation and Recovery Act (RCRA).

- **No** CORRACTS sites were identified within 1 mile of the Property.

Federal RCRA TSD Facilities Listing

The federal RCRA Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA TSD database is a compilation of reporting facilities that transport, treat, store and dispose of hazardous waste.

- **No** RCRA TSD sites were identified within ½ mile of the Property.

Federal RCRA Generators Listing

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. The database is separated into large generators (RCRIS-LG) and small generators (RCRIS-SG).

- **No** large and **five** small quantity generator sites were identified on this list within a 1/4-mile radius of the Property. Of these, **three** were located within 1/8 mile of the Property. The closest site, Carrera Tech, Inc., at 3355 McGlincey Lane, located approximately 250 feet east of the Property, in a cross-gradient direction. There was no indication of leaks or spills at this site, in the database information. Based on the database information and location, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

None of the other sites are located in an up-gradient direction and in close proximity. Therefore these cases are not considered likely to pose a threat subsurface materials under the Property.

Federal Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil or hazardous substances.

- The Property (TP) was not identified on the ERNS database.

Federal ASTM Supplemental

Various additional databases were searched by EDR. These databases and search distances are listed in **Appendix C**, Page 4 and summarized on Pages GR-2 through GR-4.

- **No** sites were identified in these databases.

State Lists

AWP, California CERCLIS-Equivalent SPL Listing

The California Environmental Protection Agency, Department of Toxic Substances Control (CalEPA DTSC), maintains an inventory of facilities that are subject to investigations concerning likely or threatened releases of hazardous substances. These sites are listed in the Annual Work Plan (AWP) database. Approximately 1% of these sites are known to be significantly contaminated at the current time. Remedial cleanup work has been completed at the majority of these sites which are identified as requiring no further action. Currently, only about 300 of these cases are identified as active hazardous substance release sites.

- **No AWP sites were identified within 1 mile of the Property.**

CalSites, California CERCLIS-Equivalent SCL Listing

The California Environmental Protection Agency, Department of Toxic Substances Control (CalEPA DTSC), maintains an inventory of facilities that are subject to investigations concerning likely or threatened releases of hazardous substances. Sites that were formerly listed in Abandoned Sites Project Information System (ASPIS), and Bond Expenditure Plan (BEP) are now included in the **CalSites** database. Approximately 1% of these sites are known to be significantly contaminated at the current time. Remedial cleanup work has been completed at the majority of these sites which are identified as requiring no further action. Currently, only about 300 of these cases are identified as active hazardous substance release sites.

- **No CalSites were identified within 1 mile of the Property.**

CHMIRS, California Hazardous Materials Incident Report System

The California Office of Emergency Services listing contains information on reported hazardous materials incidents (accidental releases or spills).

- **The Property (TP) was not identified on the CHMIRS database.**

CORTESE

The California Governor's Office of Planning and Research publishes an annual list of potential and confirmed hazardous waste sites in California. Nearly all CORTESE listings are the result of a leaking underground storage tank (LUST) case at the site.

- **A total of twenty two (22) CORTESE sites were identified within a 1-mile radius of the Property. Of these, three are located within 1/8 mile of the Property. The nearest site, Cushman Construction at 420 McGlincey Lane is located several hundred feet west of the Property in a cross-gradient direction. Based on the distance and direction, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.**

None of the other sites were located in close proximity and in a direction up-gradient

from the Property. None of the other identified sites are considered to be likely to pose a threat to subsurface environmental conditions beneath the Property.

NOTIFY 65, California Proposition 65 Records

The State Water Resource Control Board records contain facility notifications about any release which could impact drinking water.

- **Two** NOTIFY 65 sites were identified within a 1-mile radius of the Property. The nearest site, Unocal Service Station #4328 South Bascom Avenue, is located more than ½ mile south of the Property. This site is not located in close proximity and in an up-gradient direction from the Property, therefore this site is not considered to be likely to pose a threat to subsurface environmental conditions under the Property.

None of the other sites were located in close proximity and in a direction up-gradient from the Property. None of the other identified sites are considered to be likely to pose a threat to subsurface environmental conditions beneath the Property.

TOXIC PITS

The State Water Resource Control Board identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

- **No** sites were listed on this database within 1 mile of the Property.

STATE LANDFILL\WMUDS\SWAT, Solid Waste Information System and Waste Management Unit Database

The Integrated Waste Management Board and the State Water Resource Control Board maintain databases of active, closed and inactive landfills, waste management information, SWAT Program information, Chapter 15 Information, TPCA and RCRA Program information.

- **No** Landfill, WMUDS or SWAT sites were identified within ½ mile of the Property.

California LUST Listing

The California EPA and Regional Water Quality Control Board (RWQCB) generate and maintain lists of reported leaking underground storage tank (LUST) sites. Fuel leak sites rarely affect an area more than 1/8 mile from its source except under unusual conditions. Most contamination from these sites is confined to areas within 500-700 feet of the leak source.

- **A total of twenty four (24)** LUST sites were identified within ½ mile. Of these listings, **four** were located within 1/8 mile of the Property. The nearest listed site, Cushman Construction at 420 McGlincey Lane, is listed as a closed case, located 130 feet from the Property in a down-gradient direction. An examination of maps in the case closure summary for this site indicate that the actual location of this site is 1,000 feet from the Property to the west southwest, in a cross gradient direction. Based on the location

and distance, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

The next nearest listing, West Valley Construction Company, Inc., at 580 McGlincey Lane is listed as a closed LUST case, located at the west side of the Property, in a cross-gradient direction. The database indicates that a diesel fuel leak was discovered on this site and that the case was closed in 1999. Based on the close proximity to the Property, files were reviewed for this case. The results of the file review are discussed in **Section 3.3**.

None of the other sites are located in an up-gradient direction and in close proximity. Therefore these cases are not considered likely to pose a threat subsurface materials under the Property.

California Bond Expenditure Plan (CBEP)

The California Department of Health Services developed a site-specific expenditure plan for the appropriation of Hazardous Substance Cleanup Bond Act funds.

- **No** CBEP sites were identified within 1 mile of the Property.

California Underground Storage Tank

The State Water Resource Control Board maintains a list of active UST Facilities.

- **One** site was listed on this database within ¼ mile of the Property. This site, West Valley Construction is also listed as a LUST case which is discussed in **Section 3.3**.

California Facility Inventory and Hazardous Substance Container Database

The California Environmental Protection Agency and the State Water Resource Control Board maintain historical lists of UST sites.

- **Five** sites were listed on this database within ¼ mile of the Property. On these five, **three** were located within 1/8 mile. The nearest listed site, Pacific Aerospace Inc., at 354 McGlincey Lane is located approximately 200 feet from the Property. This site is listed as an active UST location. There was no indication of leaks, spills or unauthorized releases of hazardous materials in the database information for this site. This site is not indicated to be a leak site and is not located in an up-gradient direction, therefore this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

None of the other listings are located in close proximity and in a direction up-gradient from the Property, therefore these sites are not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

HIST UST: Historical UST Registered Database

- **Five** sites were listed on this database within ¼ mile of the Property. Of these five listings, **four** were indicated to be within 1/8 mile of the Property. Two of these listings were for the adjacent site, West Valley Construction at 580 McGlincey Lane, which is discussed in **Section 3.3**.

None of the other listed sites were located in close proximity and in a direction up-gradient from the Property, therefore these sites are not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

State or Local Supplemental ASTM

AST: Aboveground Petroleum Storage Tanks

The State Water Resources Board maintains a list of registered aboveground petroleum storage tanks.

- The Property was not identified on the AST sites database.

CLEANERS

The Department of Toxic Substance Control, provides this database of dry cleaners related facilities and sites that have EPA hazardous waste generator identification numbers.

- **One** site was identified on this database within ¼ mile of the Property. This site, HBL Drapery & National Gown Cleaners at 625 McGlincey Lane is located more than 1,000 feet west southwest from the Property, in a cross-gradient direction. Based on the distance and direction, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

SLIC: SLIC Region database is maintained by the California Regional Water Quality Control Board.

- **No** sites were identified on this database within ¼ mile of the Property.

HAZNET

The California Environmental Protection Agency maintains the Hazardous Waste Information System which contains facility and manifest data extracted from hazardous waste manifest data received by the DTSC.

- The Property was not identified on the HAZNET sites database.

SAN JOSE HAZMAT

The City of San Jose maintains the Hazardous Materials permit database.

- **No** sites were listed within ¼ mile of the Property.

3.3 Off-site Sources and Agency File Reviews

On April 12, 2005, ERAS reviewed Santa Clara Valley Water District (SCVWD) files on line at <http://www.valleywater.org> for the adjacent West Valley Construction Company Inc., site at 580 McGlincey Lane. This leak site is indicated to be a closed case on the database.

The closure report indicated that four fuel and waste oil USTs and associated piping were removed from a location approximately 150 feet west of the Property in 1998. Petroleum impacted soil was discovered during the UST removal. Impacted oil was over-excavated and disposed. Confirmation soil samples were collected from the excavations and analyzed for contamination. Based on a review of the remediation and analytical results from the confirmation soil samples, which did not indicate detection of petroleum hydrocarbons or fuel oxygenates, the case was closed.

Based on the lack of detectable petroleum hydrocarbons or fuel oxygenated detected in confirmation soil samples, the removal of the contamination source USTs and the closed case status, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property. Pertinent portions of the Case Closure Summary are included in **Appendix E**.

4.0 HISTORICAL USE INFORMATION

Available historical data were researched to obtain information regarding the past uses of the Property and adjacent sites, especially as the information may pertain to environmental conditions or concerns.

4.1 Historical Map and Photograph Review

The United States Geological Survey San Jose West, California 7.5 Minute Series Topographic Maps, 1959 (Photorevised 1980), shows the site elevation at approximately 220 feet.

Historical USGS Topographic maps

The United States Geological Survey San Jose West, California, 7.5 Minute Series, and San Jose 15 Minute Series Topographic Maps dated in 1942, 1947, 1951, 1953, 1961, 1968, 1973 and 1980 were reviewed online at <http://sunsite.berkeley.edu/histopo>. In the maps dated in 1942, 1947, 1951 and 1953 the Property was in an area of orchards. In 1961 and 1968 buildings were indicated in the approximate location of the current structures. In 1973 and 1980, the Property was indicated to be of urban land use.

Historical Aerial Photographs

ERAS reviewed historical aerial photographs, which included the Property available on line at <http://sunsite.berkeley.edu/mrsid> and at <http://www.terraserusa.com>. Photographs dated in 1993 and 2004 were reviewed. In 1993 and 2004, a building similar to the current structure was located on the Property.

4.2 Interview

ERAS interviewed Mr. Jim Chalmers, the owner of the business on the Property at the time of the site visit. Mr. Chalmers indicated that the recycling business had occupied the Property since the late 1970's and that the site had formerly been agricultural land used for orchards and prune drying facilities. Mr. Chalmers indicated that he was aware of a propane AST on the Property.

According to Mr. Chalmers, he was not aware of: 1) the existence of environmental liens on the Property; 2) any notifications by government of violations of current or historic environmental laws; 3) any current violations by past or current occupants of environmental laws, or 4) the current or historic presence of underground tanks on the Property. Mr. Chalmers responses were compiled on the ASTM Site Reconnaissance Checklist included in **Appendix D**.

4.3 Building and Fire Department File Review

City of Campbell Building Department

ERAS reviewed Building Department records for the Property on April 11, 2005. The earliest record, for the 700 McGlincey Lane address was a subdivision application dated in 1985. Records for the 750 McGlincey Lane address included an electrical permit and a septic system abandonment permit, both dated in 2005.

City of Campbell Fire Department

ERAS reviewed Fire Department records for the Property on April 11, 2005. The earliest records for the Property were hazardous materials management plans (HMMP) and inspection records for 700 McGlincey Lane, for ISS, dated in 1996. The HMMP indicated that acetylene, oxygen and non-flammable gasses were stored and used on the Property and that no USTs were located on the Property. HMMPs and inspection records dated in 1997, 1999, 2000, 2001 and 2003 contained similar information. No leaks or spills of hazardous materials were noted in the inspection records.

Fire Department inspection records for 710 McGlincey Lane, dated in 1997, indicated that this portion of the Property was used for a recycling center and contained no hazardous waste materials.

No Fire Department records for 750 McGlincey Lane were found.

4.4 Synopsis of Previous Environmental Investigations

There was no evidence discovered during this assessment, which indicates that any previous environmental investigations had been made on the Property.

5.0 RECONNAISSANCE

Photographs were taken during the reconnaissance to document the features observed and any environmental conditions of concern. Photographs are included in **Appendix B**.

5.1 Visual Reconnaissance of the Property

ERAS conducted a visual reconnaissance of the Property on March 30, 2005 to identify potential indications of environmental concern. The items listed in this section, if any, are representative of those which could pose recognized environmental conditions as indicated in the ASTM standard for conducting environmental site assessments.

Drums, Containers, and Storage Tanks

The on-site reconnaissance addressed containers, drums, above ground storage tanks, and other storage units containing materials, which may pose an environmental threat at the Property. Two plastic 55-gallon size drums were located in one of the storage buildings for emergency water.

Evidence of Waste Disposal

The on-site reconnaissance addressed dumps, pits, ponds, landfills, borrow pits and lagoons, which may have been used for disposal purposes at the Property. No such items were observed on the Property.

Surface Fill

No indication of surface fill was noted at the time of the site visit.

Surface Staining and Stressed Vegetation

Surficial oil staining was noted on the concrete floor in the metals machining area of the building. None of this surficial staining was noted in the vicinity of drains or cracks in the flooring. Stressed vegetation was not observed in the exterior areas of the Property during the on-site reconnaissance.

Transformers

No transformers were noted on the Property at the time of the site visit.

Air Stacks, Vents, and Odors

The on-site reconnaissance addressed air stacks, vents, and strong, pungent or noxious odors at the Property. None of these items or unusual noxious odors were observed on or near the Property.

Evidence of Underground or Aboveground Storage Tanks

A propane AST was located near the northeast side of the Property. No indication of the current or past presence of underground storage tanks was noted on the Property.

Conduits to Groundwater

Groundwater production wells or dry wells were not discovered on the Property.

Evidence of Improper Waste Discharge

Pipes and/or vents, indicating improper discharge of wastes, were not found at the Property.

On-Site Environmental Management Practices

The on-site reconnaissance addressed the following environmental management practices.

Solid Waste

The Property contained a variety of steel bins for storing recyclable materials including metals, paper products, glass and plastic. Bales of compressed recyclable materials were stored in the BARC portion of the Property.

Hazardous Materials and Waste

Small quantities of lubricants and spray cans were stored in the shop areas. No indications of leaks or spills were noted in this area. Compressed gas cylinders were noted to be properly stored in the shop area. No indications of the improper storage of hazardous materials were noted on the Property at the time of the site visit.

Treatment Facilities

No indications of wastewater disposal or treatment facilities were observed at the Property during the on-site reconnaissance.

Application of Pesticides, Herbicides or Fertilizers

No evidence of the application of pesticides, herbicides, or fertilizers was indicated during the on-site reconnaissance.

General Environmental Practices

No indications of adverse environmental practices were observed on the Property during the on-site reconnaissance.

5.2 Adjacent and Nearby Site Uses

The following observations were made of parcels adjacent to the Property:

North	East McGlincey Lane
South	Residences on Regas Drive
East	786 East McGlincey Lane, Beck's Shoes, office and warehouse
West	580 McGlincey Lane. West Valley Construction Company, offices and outdoor equipment storage

6.0 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

ERAS has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of the Property. Any exceptions to, or deletions from this Practice are described in this section of the report.

An ERAS representative visited the Property on March 30, 2005. The Property is located in an area of industrial, warehouse and residential commercial land uses. The Property was occupied by Instant Storage Service (ISS) and Bay Area Recycling Center (BARC) and residences at the time of the site visit. The adjacent sites were used for West Valley Construction Company, an office and outdoor storage yard, Beck's Shoes, a warehouse and office and residences.

The Property contains a large number of sea/land type metal storage containers arranged in rows and stacks on dirt and asphalt paved portions of the Property, two storage buildings and an office building for ISS. Several buildings, metal storage and transport bins and semi trailers on the Property were associated with the BARC operations. Two residential buildings were also located on the Property. An overhead power transmission line was located along the eastern side of the Property. The areas in the vicinity of the ISS office and BARC buildings was paved with asphalt and concrete.

The ISS storage buildings were constructed of wood frame and wood siding materials with wooden roofs and concrete floors. These buildings were rented for equipment and materials storage. The ISS office building was constructed from metal storage containers. The interior was finished with wood paneled walls, suspended acoustic ceilings and vinyl tile floors. No indications of hazardous material storage was noted in these buildings at the time of the site visit.

The BARC buildings were constructed of a variety of materials. A recyclable materials weighing and sorting building was constructed of wood frame and wood siding with a sheet metal roof, on a concrete pad. A shop and storage room building was constructed of wood frame with metal siding and roof, on a concrete pad. A storage building was constructed of concrete block walls with a wooden roof and concrete pad. The ground surface between these buildings was paved with asphalt or concrete. Hydraulic equipment for crushing and baling recyclable materials and conveyor belts were located in and adjacent to the storage buildings. No indications of spills or leaks of hazardous materials were noted in the vicinity of this equipment.

The BARC shop building contained a welding shop space, a woodworking space, storage racks and open warehouse space. Approximately nine compressed gas cylinders were noted to be properly stored in the shop area. The gasses included acetylene, argon and oxygen. A forklift with an LP gas cylinder was also stored in this area. Small quantities of spray lubricants were stored in the shop. No indications of leaks or spills were noted in this area.

The residence at 750 McGlincey Lane was of wood frame construction with stucco, constructed on a concrete foundation with a narrow crawl space. The interior was finished with lath and plaster and textured sheetrock walls. The floors were wood, carpeted or sheetrock covered. No indication of leaks or spills of hazardous materials was noted at the time of the site visit. A second smaller residence, of wood frame construction with wood siding and a wooden roof, on a concrete pad was not accessible at the time of the site visit.

The Property was reported by Mr. Jim Chalmers, to contain a septic system to serve the residences. Drywells, pits or sumps were not observed on the Property by ERAS. One propane above ground storage tank (AST) was noted on the Property. No evidence of underground storage tanks (UST) was observed on the Property by ERAS. No evidence of significant leakage, spillage or dumping of regulated material was observed on the Property by ERAS.

Historical information indicates that the Property was developed with the residences and several storage buildings for orchard operations between 1942 and 1961. Based on the appearance and construction style, the residences, recycling-sorting building and two storage buildings dated from the former agricultural operations on the Property. The shop building and shipping containers of the ISS operations appeared be more recent construction, although no building permit records specifically describe these buildings. Building records document the construction of a concrete wall and septic system abandonment in 2005.

The environmental database search identified two Notify 65 sites within 1 mile of the Property. Twenty-two (22) Cortese sites and twenty-four (24) LUST sites were identified within 1/2 mile of the Property. Five RCRA Small quantity generator sites, one UST site, five CA FID UST sites, five Hist UST sites and one Cleaners site were located within 1/4 mile.

The Property is not identified on any of the databases searched for this assessment. One adjacent site, West Valley Construction company., Inc., at 580 McGlincey Lane was listed as a closed LUST, Cortese, RCRA-SQG, Haznet and Hist UST site located to the west of the Property. The former location of the leaking USTs on this site was not in close proximity to the Property or in an up-gradient direction. The site has been remediated and confirmation soil samples did not indicate detectable concentrations of petroleum hydrocarbons or fuel oxygenates remaining on the site. This leak case was closed by the SCVWD. Based on the distance to the former USTs, cross-gradient location, case- status and confirmation soil sample analytical results, this site is not considered likely to pose a threat to subsurface environmental conditions beneath the Property.

6.2 Recommendations

No evidence was discovered during this assessment to indicate that activities currently or historically conducted on the Property have contributed fuel or solvent contamination to

soil or groundwater in the surrounding area. Recognized environmental conditions were not identified for soil or groundwater conditions at the Property. ERAS recommends that no further work be performed regarding the current status of subsurface environmental conditions at the Property, identified as 680 - 750 East McGlincey Lane in Campbell, California.

CITY OF MOUNTAIN VIEW

Water Quality 2015

CONSUMER CONFIDENCE REPORT

JUNE 2016

Tuolumne River

photo: SFPUC

Your Water Quality

The City of Mountain View is committed to providing its customers with a safe and reliable supply of high-quality drinking water that meets federal and state standards. The City of Mountain View works with its wholesale water suppliers, the San Francisco Public Utilities Commission (SFPUC) and the Santa Clara Valley Water District (SCVWD), to test over 2,000 water samples each year to continuously monitor water quality. Each year the City publishes a summary of water quality sampling results and other information about Mountain View's water system in its Consumer Confidence Report. This 2015 Consumer Confidence Report was prepared in accordance with Federal Safe Drinking Water Act and State Water Resources Control Board requirements.

The Water Journey: Source to Tap

Mountain View's drinking water undertakes a long journey before being delivered to your tap. From its original source, water is captured in reservoirs and aquifers, then treated and disinfected before entering the City's water distribution system and being delivered to your home. Look inside to learn about the journey your water takes before being delivered, and how the City operates and maintains its water system.

This report contains important information about your community's water quality. If necessary, please have the report translated or speak with a friend who understands it well.

Este reporte contiene información importante sobre la calidad del agua en su comunidad. Si necesita entender su contenido en español, pida a un familiar o amigo que se la explique.

Это сообщение содержит важную информацию о качестве воды в нашем регионе. Если вам нужна помощь в переводе, поговорите с человеком, хорошо понимающим английский язык.

这份报告含有关于您社区饮用水质量的重要资讯。如果需要, 请找可以为您翻译的人翻译或解释清楚

Your Drinking Water

Mountain View's Water Supply Sources

The City of Mountain View supplies nearly eight million gallons per day to over 17,900 meter connections using reservoirs, pump stations, wells and over 176 miles of pipeline. The City obtains water from several sources to provide operational flexibility during system maintenance, drought and disasters. The map on the right shows the three zones where source waters are distributed within Mountain View. Mountain View's drinking water sources are described below.

San Francisco Public Utilities Commission

The City purchases approximately 90 percent of its drinking water from the San Francisco Public Utilities Commission's (SFPUC) Hetch Hetchy system. Most of the SFPUC's water originates from Sierra Nevada snowmelt that flows into the Tuolumne River and is stored in the Hetch Hetchy Reservoir in Yosemite National Park. Other sources of SFPUC water include rainwater runoff collected in watersheds in Alameda, San Mateo and Santa Clara counties.

Santa Clara Valley Water District

Approximately 8 percent of the City's potable water supply is purchased from the Santa Clara Valley Water District (SCVWD). About half of this water is imported from the Sacramento-San Joaquin Delta (Delta). The SCVWD's other water sources include local groundwater and surface water collected and stored in local reservoirs. For operational flexibility, the zone served with SCVWD water is occasionally supplemented with water from the SFPUC.

City Wells

Two percent of the potable water supply comes from groundwater wells owned and operated by the City. This water is pumped from a deep aquifer and blended with SFPUC water for distribution to City water customers.

San Luis Reservoir, October 2015

Conservation Update

In response to the increasingly severe drought, Governor Jerry Brown and the State Water Resources Control Board (Water Board) imposed mandatory reductions on urban water suppliers throughout California. Mountain View's mandatory reduction was set at 16 percent (compared to 2013 water use). Thanks to the efforts of our residents, businesses and institutions, Mountain View exceeded the 16 percent mandate and achieved 28 percent conservation for the entire year. However, despite normal precipitation this winter, sustained efforts will be necessary to fully replenish water supplies. Information about the City's current water-use restrictions and conservation programs can be found online at www.conservewater.mountainview.gov or by calling the City's Water Conservation Hotline at (650) 903-6216.

The Water Journey: Source to Tap

Mountain View's drinking water completes a long journey before reaching each of the City's water customers. From its original source as rain or snow, water is captured in reservoirs and aquifers, then treated and disinfected before being delivered to the City's water distribution system and your tap.

Capturing Water from the Source

Most of the City's drinking water originates from pristine Sierra Nevada snowmelt, captured near the headwaters of the Tuolumne River in the Hetch Hetchy Reservoir in Yosemite National Park. Other sources of water include the Delta and local rainwater runoff captured in reservoirs in Santa Clara and Alameda counties. The Delta transports snowmelt and rainwater runoff from 40 percent of California's land area, including the Sierra Nevada, Coast Ranges, and southern Cascade Range. Water in the Delta system travels through rivers, aqueducts, and reservoirs such as Shasta, Oroville, New Melones, New Don Pedro, Del Valle, and San Luis before entering Santa Clara County. Once in the county, Delta water is percolated into the groundwater aquifers or combined with local surface water and stored in local reservoirs for treatment and groundwater replenishment.

Sacramento-San Joaquin Delta photo: DWR

Treatment and Disinfection

Different sources of water require different levels of treatment and disinfection. Hetch Hetchy Reservoir is the largest water supply on the West Coast that does not require conventional treatment. Due to its highly protected source and conveyance facilities (closed pipes and tunnels), Hetch Hetchy water requires only pH adjustment for corrosion control, and disinfection. Delta water and rainwater runoff stored in regional reservoirs use conventional water treatment processes (coagulation/flocculation, sedimentation and filtration), in addition to corrosion control and disinfection. Facilities used to treat and disinfect the City's water sources include the Tesla Treatment Facility, Sunol Valley Water Treatment Plant, and Rinconada Treatment Plant.

Rinconada Treatment Plant photo: SCVWD

Delivery System

Mountain View's water distribution system includes over 176 miles of pipelines up to 27 inches in diameter. The City's three pressure zones are hydraulically isolated to maintain optimal pressure and regulate the flow of different sources into each zone. Mountain View has four water storage reservoirs that hold between one and eight million gallons each. The City's reservoirs provide operational maintenance flexibility and back-up water supply in case of emergency.

Graham Reservoir Pump Station

Teamwork

Operating a drinking water system requires a large team of individuals with knowledge and training in different disciplines. Mountain View's staff of engineers and certified operators and technicians monitor important items such as quality and pressure, perform ongoing maintenance and repairs, plan for and design system replacements, upgrades and extensions and identify and quickly address problems such as leaks. The City also works closely with its wholesale suppliers to coordinate maintenance shutdowns and repairs, source water changes, and other actions that could change the characteristics or availability of the City's water supply.

Utility crew performs a repair.

Drought Challenges

As conditions change due to drought and other factors, the City and its wholesale suppliers adjust operations to meet each new challenge. Common problems encountered during drought years that can affect the taste and quality of drinking water include: increased surface water temperature, slower reservoir turnover, and slower system flow. To mitigate and prevent water quality problems, the City and its wholesale suppliers work together to adjust operational practices as needed. In some cases these activities, such as system flushing, may appear to be contradictory to water conservation objectives, but are necessary to ensure the water we deliver remains fresh.

Protecting Your Health

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline at (800) 426-4791. Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons undergoing chemotherapy, people who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, and some elderly and infants can be particularly at risk from infections. These individuals should seek advice about drinking water from their health-care providers. EPA and Center for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection from *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at (800) 426-4791.

Water Quality Monitoring

Nitrate: Nitrate in drinking water at levels above 10 milligrams per liter (mg/L) is a health risk for infants less than six months of age. Such nitrate levels in drinking water can interfere with the capacity of an infant's blood to carry oxygen, resulting in serious illness; symptoms include shortness of breath and blueness of the skin. Nitrate levels above 10 mg/L may also affect the ability of the blood to carry oxygen in other individuals such as pregnant women and those with certain specific enzyme deficiencies. If you are caring for an infant or you are pregnant, you should seek advice from your health-care provider. Nitrate levels in Mountain View's water did not exceed regulatory health levels.

Lead: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water comes primarily from materials and components associated with water service lines and home plumbing. The City of Mountain View is responsible for providing high quality drinking water but cannot control the variety of materials used in private plumbing components. When your water has been sitting in your on-site plumbing for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. Keep a pitcher or bucket nearby to collect this flush water and use it to water plants in your house or garden.

If you are concerned about lead in your water, you may wish to have your water tested independently. Testing can be performed using an over-the-counter lead testing kit commonly available at local hardware stores. Additional information on lead in drinking water, testing methods and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/lead.

In compliance with state and federal regulations, the City conducts lead testing every three years. Samples are collected from representative homes throughout the City and sent to a laboratory for testing.

Cryptosporidium and Giardia: *Cryptosporidium* and *Giardia* are parasitic microbes found in most surface water supplies. If ingested, these parasites may produce symptoms of nausea, stomach cramps and headaches. The SFPUC and SCVWD regularly test for *Cryptosporidium* and *Giardia* in their source water and treated water supplies.

Chloramine Disinfectant: Drinking water provided to the City of Mountain View by the SFPUC and SCVWD is disinfected using chloramine. Although people and animals can safely drink chloraminated water, chloramine must be removed or neutralized for some special users, including some business and industrial customers, kidney dialysis patients and customers with fish and amphibian pets. More information on chloramine is available at: <https://www3.epa.gov/region9/water/chloramine.html>.

Drinking Water Contaminants

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity. Contaminants that may be present in source water include:

Microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

Inorganic contaminants, such as salts and metals, that can be naturally occurring or from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.

Pesticides and herbicides that may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.

Organic chemical contaminants, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application and septic systems.

Radioactive contaminants that can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the EPA and the Water Board regulate the amount of certain contaminants in water provided by public water systems. The U.S. Food and Drug Administration sets standards for bottled water (based on EPA standards) to provide the same protection for public health. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791.

Water Quality Data

Water quality staff from the SFPUC, the SCVWD, and the City of Mountain View regularly collect and test water samples from reservoirs, wells and designated sampling points to ensure the water supplied to Mountain View customers meets state and federal drinking water standards. This table provides an analysis of the results of water samples collected in 2015. The table contains results for substances detected in the water, including the name of each substance, the highest level allowed by regulation, the amount detected, the usual sources of each substance and a key to the units of measurement. Sample results that are below detection limits are not listed. The presence of a substance does not necessarily indicate the drinking water poses a health risk. For additional details about this table, refer to the important definitions below and the table key on Page 6.

Important Definitions

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs are set by the U.S. EPA.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected health risk. PHGs are set by the California Environmental Protection Agency.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected health risk. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Detection Limit for Purposes of Reporting (DLR): The designated minimum level at or above which a contaminant in drinking water must be reported to the Water Board.

CITY OF MOUNTAIN VIEW SOURCE WATER QUALITY DATA FOR 2015 (1)

Footnotes

- (1) All results met state and federal drinking water health standards.
- (2) CMV well sampling is conducted in accordance with regulatory schedules.
- (3) Turbidity is a water clarity indicator and also indicates the effectiveness of water treatment plants.
- (4) Turbidity is measured every four hours. Values shown are monthly average turbidity values.
- (5) Turbidity limits are based on the TT requirements in the state drinking water regulations, which require filtered water turbidity to be equal to or less than 0.3 NTU a minimum of 95 percent of the time.
- (6) Fluoride occurs naturally in source waters from the SFPUC, SCVWD, and City wells. The City of Mountain View and SFPUC added fluoride in 2015 to meet Water Board required levels.
- (7) The natural fluoride in the Hetch Hetchy supply was ND. Elevated fluoride levels in the Sunol Valley Water Treatment Plant raw water are attributed to the transfer of the fluoridated Hetch Hetchy water into the reservoirs.
- (8) The detected chlorate in the treated water is a degradation product of sodium hypochlorite used by the SFPUC for water disinfection.
- (9) The reported data for TTHMs and HAA-5s describe the range and the highest quarterly running annual average value. The MCLs only apply to the running annual averages.
- (10) The Lead and Copper Rule monitoring results for 2013, the most recently required testing, comply with the U.S. EPA health regulations. One of the 34 water samples collected at the consumer taps had Lead concentrations above the Action Level. Value reported is the 90th percentile.
- (11) The Lead and Copper Rule monitoring results for 2013 comply with the U.S. EPA health regulations. None of the 34 samples had Copper concentrations above the Action Level. Value reported is the 90th percentile.

Protecting Source Waters

To give water utilities and community members the information they need to protect their drinking water sources, the Safe Drinking Water Act requires states to develop EPA-approved programs to carry out assessments of all source waters. A Drinking Water Source Assessment is a study that defines the land area contributing water to each public water system, identifies the major potential sources of contamination that could affect the drinking water supply, and determines how susceptible the public water supply is to this potential contamination. Utilities and citizens can use the publicly available study results to take actions to reduce potential sources of contamination and protect drinking water. Studies have been conducted for all three City of Mountain View potable water supplies and are available for review at the State Water Resources Control Board, Division of Drinking Water District Office, 850 Marina Bay Parkway, Building P, Second Floor, Richmond, California, 94804, (510) 620-3474. More information and study summaries are available online at www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/dwsap.shtml.

SFPUC

The SFPUC's annual Hetch Hetchy Watershed Survey evaluates sanitary conditions, water quality, potential contamination sources and the results of watershed management efforts by the SFPUC and its partner agencies, including the National Park Service and United States Forest Service, to reduce or eliminate contamination sources. The SFPUC also conducts sanitary surveys of the local Alameda and Peninsula watersheds, as well as approved standby water sources, every five years. The latest five-year surveys were completed in 2011 for the period of 2006-2010, with the next surveys scheduled for 2016. The surveys identified wildlife, livestock and human activities as potential contamination sources.

SCVWD

SCVWD surface water is imported mainly from the South Bay Aqueduct, Dyer Reservoir, Lake Del Valle and San Luis Reservoir, which all receive water from the Sacramento-San Joaquin Delta watershed. The SCVWD's local water sources include Lexington and Anderson reservoirs. The SCVWD's source waters are vulnerable to potential contamination from a variety of land use practices, such as agricultural and urban runoff, recreational activities, livestock grazing and residential and industrial development. Water from imported sources is vulnerable to wastewater treatment plant discharges, seawater intrusion and wildland fires. Commercial stables and historic mining practices may also be sources of contamination to local water sources. No contaminant associated with any of these activities has been detected in the SCVWD's treated waters. The SCVWD's water treatment plants use multiple techniques for disinfection and physical removal of contaminants. For additional information, visit the SCVWD website at www.valleywater.org.

City Wells

Groundwater beneath the City of Mountain View is available in two aquifers separated by natural clay formations. Because City wells are drilled deep into the lower aquifer, the clay formations and geology help protect the City's groundwater supply from contamination. Mountain View regularly tests water produced by City wells and conducts assessments to ensure the safety of its groundwater supply. The source assessments of Mountain View's drinking water wells determined the City's groundwater is potentially vulnerable to contamination from auto repair shops and leaking underground storage tanks, but noted these potential impacts are likely to be confined to the upper aquifer. To receive a copy of the well assessment summaries, contact the Public Services Division at (650) 903-6329.

Treatment Technique Violation

Failure to Meet Filtration Requirement - Due to an operational error in the San Francisco Regional Water System, the SFPUC failed to filter drinking water from the San Antonio Reservoir for a brief period of time on March 3, 2015. A valve was accidentally opened for approximately 20 minutes, allowing a limited amount of untreated water from the SFPUC's San Antonio Reservoir in the East Bay to enter into the treated San Francisco Regional Water System, and subsequently enter the City of Mountain View's system. The untreated water was blended with already treated water before reaching any customers, providing some disinfection treatment. Some customers in our service area received this blend of water. The San Antonio Reservoir is a highly protected drinking water reservoir with no public access. Two years of water quality data, including additional samples taken immediately after the incident, confirmed the absence of pathogens of concern, such as *Cryptosporidium* and *Giardia*. The SFPUC has been working with its regulatory agency, the Water Board's Division of Drinking Water, and their wholesale customers, including the City of Mountain View, to develop measures to prevent a future recurrence of such an incident.

APPENDIX I

QUALIFICATIONS

Natalie Vaughan – Project Manager

BS - Environmental Planning, Humboldt State University

Ms. Vaughan provides project management to ensure ASTM compliance and satisfaction of client requirements for Phase I Environmental Assessments, Environmental Transaction Screens, Regulatory Database Review, and Historical Records Review.

Project experience for Ms. Vaughan includes:

- Phase I Environmental Site Assessments (PHI ESA)
- Environmental Transaction Screens (ETS)
- Regulatory Database Review
- Historical Records Review

In addition, prior to joining the environmental consulting industry, Ms. Vaughan spent four years studying a diverse range of environmental disciplines including: ecosystem analysis, coastal and marine planning, soil science, environmental law, public lands management, and environmental impact assessment.

Amanda G. Lettieri – National Client Manager

BS – Marine Science, Richard Stockton College of New Jersey
OSHA 40-hour Hazardous Waste Operations and Emergency Response
Wetland Delineator Program (NJ)

Ms. Lettieri has fourteen years experience in the environmental services industry. Her project experience includes: Phase I and Phase II Environmental Site Assessments, field activities associated with environmental investigations/remediation, preparing PA/SI, RI/RAW, and RAR documents for contaminated sites in New Jersey, freshwater wetland delineations, Baseline Ecological Evaluations, and NJDEP and USACE permit applications.

Project experience for Ms. Lettieri includes:

- Phase I and II Environmental Site Assessments
- Implementation of soil and groundwater investigations and remediation in conjunction with regulatory agencies
- Conducting wetland delineations and completing Freshwater Wetland permit applications to the NJDEP
- Baseline Ecological Evaluations
- Prepared PA/SI, RI/RAW, and RAR documents for various contaminated sites in New Jersey
- Prepared State and Federal permit applications for various types of sites throughout NJ

Ms. Lettieri has a working knowledge of the ArcGIS program and has integrated this type of mapping into all aspects of environmental services.

WILL SERVE LETTRS

February 22, 2019

Ruggeri-Jensen-Azar
Attn: Jim Schul
8055 Camino Arroyo
Gilroy, CA 95020
jschul@rja-gps.com

Re: 680 and 700 East McGlincy Lane, Campbell – Will Serve

Dear Mr. Schul:

This letter will serve as the West Valley Sanitation District's (District) "WILL SERVE" for the proposed 157,467 square foot storage facility located at 680 and 700 East McGlincy Lane in the City of Campbell (APNs 412-35-039 and 412-35-040).

Pursuant to District Ordinance Code Section 10.130, the owner is required to pay all applicable fees prior to the issuance of a sewer connection permit.

Please contact me at (408) 385-3030 for any additional information.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Alan K'.

I&R Job No.: 18-209

INTRODUCTION

The project proposes to demolish existing structures and construct a three story self-storage facility with a one-level basement. A 640 square foot manager's residential unit will be provided within the project. The site is located at 680 and 700 East McGlinchey Lane in Campbell, California. The project is planned to be constructed within a period of 10 months.

This report evaluates the project's potential to result in significant environmental noise or vibration impacts with respect to applicable California Environmental Quality Act (CEQA) guidelines. The report is divided into three sections: 1) the Setting Section provides a brief description of the fundamentals of environmental noise and vibration, summarizes applicable regulatory criteria, and discusses the results of the ambient noise monitoring survey completed to document existing conditions; 2) the General Plan Consistency section discusses land use compatibility utilizing noise and vibration-related policies in the City's General Plan; and, 3) the Impacts and Mitigation Measures Section describes the significance criteria used to evaluate project impacts and provides a discussion of each project impact. No significant noise impacts were identified for the project; therefore, mitigation is not provided.

SETTING

Fundamentals of Environmental Noise

Noise may be defined as unwanted sound. Noise is usually objectionable because it is disturbing or annoying. The objectionable nature of sound could be caused by its *pitch* or its *loudness*. *Pitch* is the height or depth of a tone or sound, depending on the relative rapidity (*frequency*) of the vibrations by which it is produced. Higher pitched signals sound louder to humans than sounds with a lower pitch. *Loudness* is intensity of sound waves combined with the reception characteristics of the ear. Intensity may be compared with the height of an ocean wave in that it is a measure of the amplitude of the sound wave.

In addition to the concepts of pitch and loudness, there are several noise measurement scales which are used to describe noise in a particular location. A *decibel (dB)* is a unit of measurement which indicates the relative amplitude of a sound. The zero on the decibel scale is based on the lowest sound level that the healthy, unimpaired human ear can detect. Sound levels in decibels are calculated on a logarithmic basis. An increase of 10 decibels represents a ten-fold increase in acoustic energy, while 20 decibels is 100 times more intense, 30 decibels is 1,000 times more intense, etc. There is a relationship between the subjective noisiness or loudness of a sound and its intensity. Each 10 decibel increase in sound level is perceived as approximately a doubling of loudness over a fairly wide range of intensities. Technical terms are defined in Table 1.

There are several methods of characterizing sound. The most common in California is the *A-weighted sound level (dBA)*. This scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Representative outdoor and indoor noise levels in units of dBA are shown in Table 2. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an

average level that has the same acoustical energy as the summation of all the time-varying events. This *energy-equivalent sound/noise descriptor* is called L_{eq} . The most common averaging period is hourly, but L_{eq} can describe any series of noise events of arbitrary duration.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about plus or minus 1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends upon the distance the receptor is from the noise source. Close to the noise source, the models are accurate to within about plus or minus 1 to 2 dBA.

Since the sensitivity to noise increases during the evening and at night -- because excessive noise interferes with the ability to sleep -- 24-hour descriptors have been developed that incorporate artificial noise penalties added to quiet-time noise events. The *Community Noise Equivalent Level (CNEL)* is a measure of the cumulative noise exposure in a community, with a 5 dB penalty added to evening (7:00 pm - 10:00 pm) and a 10 dB addition to nocturnal (10:00 pm - 7:00 am) noise levels. The *Day/Night Average Sound Level (DNL or L_{dn})* is essentially the same as CNEL, with the exception that the evening time period is dropped and all occurrences during this three-hour period are grouped into the daytime period.

Effects of Noise

Sleep and Speech Interference

The thresholds for speech interference indoors are about 45 dBA if the noise is steady and above 55 dBA if the noise is fluctuating. Outdoors the thresholds are about 15 dBA higher. Steady noises of sufficient intensity (above 35 dBA) and fluctuating noise levels above about 45 dBA have been shown to affect sleep. Interior residential standards for multi-family dwellings are set by the State of California at 45 dBA CNEL. Typically, the highest steady traffic noise level during the daytime is about equal to the CNEL and nighttime levels are 10 dBA lower. The standard is designed for sleep and speech protection and most jurisdictions apply the same criterion for all residential uses. Typical structural attenuation is 12-17 dBA with open windows. With closed windows in good condition, the noise attenuation factor is around 20 dBA for an older structure and 25 dBA for a newer dwelling. Sleep and speech interference is therefore possible when exterior noise levels are about 57-62 dBA CNEL with open windows and 65-70 dBA CNEL if the windows are closed. Levels of 55-60 dBA are common along collector streets and secondary arterials, while 65-70 dBA is a typical value for a primary/major arterial. Levels of 75-80 dBA are normal noise levels at the first row of development outside a freeway right-of-way. In order to achieve an acceptable interior noise environment, bedrooms facing secondary roadways need to be able to have their windows closed, those facing major roadways and freeways typically need special glass windows.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that the causes for annoyance include interference with speech, radio and television, house vibrations, and

interference with sleep and rest. The CNEL as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these different sources. When measuring the percentage of the population highly annoyed, the threshold for ground vehicle noise is about 50 dBA CNEL. At a CNEL of about 60 dBA, approximately 12 percent of the population is highly annoyed. When the CNEL increases to 70 dBA, the percentage of the population highly annoyed increases to about 25-30 percent of the population. There is, therefore, an increase of about 2 percent per dBA between a CNEL of 60-70 dBA. Between a CNEL of 70-80 dBA, each decibel increase increases by about 3 percent the percentage of the population highly annoyed. People appear to respond more adversely to aircraft noise. When the CNEL is 60 dBA, approximately 30-35 percent of the population is believed to be highly annoyed. Each decibel increase to 70 dBA adds about 3 percentage points to the number of people highly annoyed. Above 70 dBA, each decibel increase results in about a 4 percent increase in the percentage of the population highly annoyed.

Fundamentals of Groundborne Vibration

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One method is the Peak Particle Velocity (PPV). The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. In this report, a PPV descriptor with units of mm/sec or in/sec is used to evaluate construction generated vibration for building damage and human complaints. Table 3 displays the reactions of people and the effects on buildings that continuous or frequent intermittent vibration levels produce. The guidelines in Table 3 represent syntheses of vibration criteria for human response and potential damage to buildings resulting from construction vibration.

Construction activities can cause vibration that varies in intensity depending on several factors. The use of pile driving and vibratory compaction equipment typically generates the highest construction related groundborne vibration levels. Because of the impulsive nature of such activities, the use of the PPV descriptor has been routinely used to measure and assess groundborne vibration and almost exclusively to assess the potential of vibration to cause structural damage and the degree of annoyance for humans.

The two primary concerns with construction-induced vibration, the potential to damage a structure and the potential to interfere with the enjoyment of life, are evaluated against different vibration limits. Human perception to vibration varies with the individual and is a function of physical setting and the type of vibration. Persons exposed to elevated ambient vibration levels, such as people in an urban environment, may tolerate a higher vibration level.

Structural damage can be classified as cosmetic only, such as paint flaking or minimal extension of cracks in building surfaces; minor, including limited surface cracking; or major, that may threaten the structural integrity of the building. Safe vibration limits that can be applied to assess the potential for damaging a structure vary by researcher. The damage criteria presented in Table 3 include several categories for ancient, fragile, and historic structures, the types of structures most

at risk to damage. Most buildings are included within the categories ranging from “Historic and some old buildings” to “Modern industrial/commercial buildings”. Construction-induced vibration that can be detrimental to the building is very rare and has only been observed in instances where the structure is at a high state of disrepair and the construction activity occurs immediately adjacent to the structure.

The annoyance levels shown in Table 3 should be interpreted with care since vibration may be found to be annoying at lower levels than those shown, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is very little risk of actual structural damage.

TABLE 1 Definition of Acoustical Terms Used in this Report

Term	Definition
Decibel, dB	A unit describing, the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20 micro Pascals.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micro Pascals (or 20 micro Newtons per square meter), where 1 Pascal is the pressure resulting from a force of 1 Newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e. g., 20 micro Pascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hz	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sound are below 20 Hz and Ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, L_{eq}	The average A-weighted noise level during the measurement period.
L_{max} , L_{min}	The maximum and minimum A-weighted noise level during the measurement period.
L_{01} , L_{10} , L_{50} , L_{90}	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, L_{dn} or DNL	The average A-weighted noise level during a 24-hour day, obtained after addition of 10 decibels to levels measured in the night between 10:00 pm and 7:00 am.
Community Noise Equivalent Level, CNEL	The average A-weighted noise level during a 24-hour day, obtained after addition of 5 decibels in the evening from 7:00 pm to 10:00 pm and after addition of 10 decibels to sound levels measured in the night between 10:00 pm and 7:00 am.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends upon its amplitude, duration, frequency, and time of occurrence and tonal or informational content as well as the prevailing ambient noise level.

TABLE 3 Reaction of People and Damage to Buildings from Continuous or Frequent Intermittent Vibration Levels

Velocity Level, PPV (in/sec)	Human Reaction	Effect on Buildings
0.01	Barely perceptible	No effect
0.04	Distinctly perceptible	Vibration unlikely to cause damage of any type to any structure
0.08	Distinctly perceptible to strongly perceptible	Recommended upper level of the vibration to which ruins and ancient monuments should be subjected
0.1	Strongly perceptible	Threshold at which there is a risk of damage to fragile buildings with no risk of damage to most buildings
0.25	Strongly perceptible to severe	Threshold at which there is a risk of damage to historic and some old buildings.
0.3	Strongly perceptible to severe	Threshold at which there is a risk of damage to older residential structures
0.5	Severe - Vibrations considered unpleasant	Threshold at which there is a risk of damage to new residential and modern commercial/industrial structures

Regulatory Background

The State of California and the City of Campbell have established regulatory criteria that are applicable in this assessment. The State CEQA Guidelines, Appendix G, are used to assess the potential significance of impacts pursuant to local General Plan policies, Municipal Code standards, or the applicable standards of other agencies. A summary of the applicable regulatory criteria is provided below.

2018 State CEQA Guidelines. The CEQA contains guidelines to evaluate the significance of effects of environmental noise attributable to a proposed project. Under CEQA, noise impacts would be considered significant if the project would result in:

- (a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies;
- (b) Generation of excessive groundborne vibration or groundborne noise levels;
- (c) For a project located within the vicinity of a private airstrip or an airport land use plan or where such a plan has not been adopted within two miles of a public airport or public use airport, if the project would expose people residing or working in the project area to excessive noise levels.

Checklist items (a) and (b) are applicable to the proposed project. The project would not expose people residing or working in the project area to excessive aircraft noise levels; therefore, item (c) is not carried further in this analysis.

City of Campbell General Plan. The Noise Element in Conservation and Natural Resources Chapter in the City of Campbell General Plan sets forth goals, policies and strategies that address noise the City of Campbell. The following policies are applicable to the proposed project:

Policy CNR-10.1: Noise Reduction: Reduce noise levels at the source.

Strategy CNR-10.1a: Noise Ordinance: Adopt and strictly enforce a Noise Ordinance that establishes noise standards for various noise-sensitive land uses and for all Zoning Districts.

Strategy CNR-10.1b: Minimization of Noise Exposure and Generation: Encourage practices and technologies that minimize noise exposure and noise generation in new development and redevelopment.

Strategy CNR-10.1c: Noise and New Development: New residential development shall conform to a traffic-related noise exposure standard of 60 dBA CNEL for outdoor noise in noise-sensitive outdoor activity and 45 dBA CNEL for indoor noise.

Strategy CNR-10.1e: Construction Noise Mitigation: Require mitigation measures during construction, including limits on operating times of noise-producing activities (including vehicles).

Strategy CNR-10.1i: Vehicle Noise Reduction: Employ roadway design, traffic signalization, reduced speed limits and other management techniques to reduce noise caused by speed or acceleration of vehicles.

Strategy CNR-10.1j: Truck Traffic Limits: Limit commercial, industrial and construction truck traffic in residential areas.

City of Campbell Municipal Code. Chapter 21.16.070 of City of Campbell’s Municipal Code prescribes standards for and to provide an effective and readily available remedy for violations of noise standards. The chapter states that private construction between the hours of 8 a.m. and 5 p.m. Monday through Friday, and between the hours of 9 a.m. and 4 p.m. Saturday, would be in compliance with the Municipal Code.

Chapter 21.16.090 of City of Campbell’s Municipal Code states that uses, activities, and processes shall not generate ground vibration that is perceptible without instruments by average person at any point along or beyond the property line of the parcel containing the activities. Vibrations from temporary construction, demolition and vehicles that enter and leave the subject parcel (e.g., construction equipment, trains, trucks, etc.) shall be exempt.

Existing Noise Environment

The project site is located at 680 and 700 McGlincy Lane in Campbell, California. The site is surrounded by existing residential uses to the south and industrial uses to the north, east and west. A noise monitoring survey was performed from Tuesday, November 13, 2018 through Friday, November 16, 2018 to quantify and characterize ambient noise levels at the site and in the project vicinity. The monitoring survey included one long-term noise measurements (LT-1) and two short-term noise measurements (ST-1 and ST-2), as shown in Figure 1. The noise environment at the site and at the nearby land uses results primarily from vehicular traffic along East McGlincy Lane and distance traffic along US 17.

Long-term noise measurement LT-1 was made at the southwest corner of the project site, approximately 250 feet from the centerline of East McGlincy Lane. Hourly average noise levels at this location ranged from 50 to 65 dBA L_{eq} during the day and from 45 to 57 dBA L_{eq} at night. The day-night average noise level on Wednesday, November 14, 2018 and November 15, 2018 was 60 dBA CNEL. The daily trend in noise levels at LT-1 is shown in Figure 2 and 3.

Short-term noise measurements ST-1 and ST-2 were conducted on Tuesday, November 13, 2018 in ten-minute intervals starting at 1:40 p.m. and concluding at 1:50 p.m. ST-1 was made approximately 10 feet from the southern property line of the site and ST-2 was made in front of 669 Regas Drive, south of project area. Table 4 summarizes the results of the short-term measurements.

TABLE 4 Summary of Short-Term Noise Measurement Data (dBA)

ID	Location (Start Time)	Measured Noise Levels, dBA					Primary noise source
		L ₁₀	L ₅₀	L ₉₀	L _{eq}	CNEL	
ST-1	10 feet from the wall at southern property line, approximately 300 feet from centerline of East McGlincy Lane (11/13/18, 1:40 p.m. to 1:50 p.m.)	53	50	48	51	54	Traffic on East McGlincy Lane and US 17
ST-2	669 Regas Drive, 25 feet from centerline of Regas Drive. (11/13/18, 1:40 p.m. to 1:50 p.m.)	48	45	45	46	48	Distant traffic

FIGURE 2 Daily Trend in Noise Levels at LT-1, November 14th, 2018

FIGURE 3 Daily Trend in Noise Levels at LT-1, November 15th, 2018

GENERAL PLAN CONSISTENCY ANALYSIS

The impacts of site constraints such as exposure of the proposed project to excessive levels of noise are not considered under CEQA. This section addresses Noise and Land Use Compatibility for consistency with the policies set forth in the City's General Plan.

Noise and Land Use Compatibility

The only noise sensitive interior use proposed with the project is a manager's residential unit, provided within the proposed building. There are no exterior noise sensitive areas proposed for the project. The City of Campbell requires that interior noise levels be maintained at 45 dBA CNEL or less for residences.

Future Interior Noise Environment

The manager's residential unit will be on the second floor of the storage building with the façade facing East McGlinchy Lane. The exterior noise level at the unit façade, based on the results of the noise monitoring survey, is 70 dBA CNEL.

Interior noise levels would vary depending upon the design of the buildings (relative window area to wall area) and the selected construction materials and methods. Standard residential construction provides approximately 15 dBA of exterior-to-interior noise reduction, assuming the windows are partially open for ventilation. Standard construction with the windows closed provides approximately 20 to 25 dBA of noise reduction in interior spaces. Where exterior noise levels range from 60 to 65 dBA CNEL, the inclusion of adequate forced-air mechanical ventilation is often the method selected to reduce interior noise levels to acceptable levels by providing a habitable interior environment and closing the windows to control noise. Where noise levels exceed 65 dBA CNEL, forced-air mechanical ventilation systems and sound-rated construction methods are normally required. Such methods or materials may include a combination of smaller window and door sizes as a percentage of the total building façade facing the noise source, sound-rated windows and doors, sound-rated exterior wall assemblies, and mechanical ventilation so windows may be kept closed at the occupant's discretion.

Interior noise levels with standard construction and open windows would exceed the City's 45 dBA CNEL threshold in the manager's residential unit. With the inclusion of forced air mechanical ventilation and windows with STC 28 rating or higher, interior noise levels in this unit would comply with the 45 dBA CNEL interior noise threshold. The calculations for minimum required STC ratings were made assuming a window to wall ratio of 40 % or less and a wall construction with a sound rating of STC 39 or higher.

NOISE AND VIBRATION IMPACTS AND MITIGATION MEASURES

This section describes the significance criteria used to evaluate project impacts under CEQA, provides a discussion of each project impact. No significant noise impacts were identified for the project; therefore, mitigation is not provided.

Significance Criteria

The following criteria were used to evaluate the significance of environmental noise resulting from the project:

1. **Temporary or Permanent Noise Increases in Excess of Established Standards:** A significant impact would be identified if project operations or construction would result in a substantial temporary or permanent increase in ambient noise levels at sensitive receivers in excess of the local noise standards contained in the Campbell General Plan or Municipal Code, as follows:
 - o **Operational Noise in Excess of Standards.** A significant noise impact would be identified if the project would expose persons to or generate noise levels that would exceed applicable noise standards presented in the Campbell General Plan or Municipal Code.
 - o **Permanent Noise Increase.** The City of Campbell does not define the permanent noise level increase that is considered substantial. Typically, a permanent increase of 3 dBA CNEL or greater at noise-sensitive receptors would be considered significant when projected noise levels would exceed those considered satisfactory for the affected land use. An increase of 5 dBA CNEL or greater would be considered significant when projected noise levels would continue to meet those considered satisfactory for the affected land use. The City of Campbell defines a noise level of 60 dBA CNEL or less to be normally acceptable for residential land uses.
 - o **Temporary Noise Increase.** The City of Campbell does not define the temporary noise level increase that is considered substantial. Based on the thresholds for speech interferences (see Setting Section), a significant temporary noise increase would be identified if hourly average construction noise levels exceed 60 dBA L_{eq} and the ambient by at least 5 dBA L_{eq} at residential land uses for a period of more than one year.
2. **Groundborne Vibration from Construction:** The City of Campbell exempts vibrations from temporary construction, demolition and vehicles that enter and leave the subject parcel from its vibration criteria. To avoid structural damage, the California Department of Transportation recommends a vibration limit of 0.5 in/sec PPV for buildings structurally sound and designed to modern engineering standards, which typically consist of buildings constructed since the 1990s. A conservative vibration limit of 0.3 in/sec PPV has been used in this report for buildings that are found to be structurally sound but where structural damage is a major concern (see Table 3).

Impact 1: Temporary or Permanent Noise Increases in Excess of Established Standards. Project construction, operations, and traffic would not generate noise levels that exceed the applicable noise thresholds or result in a substantial temporary or permanent noise level increase at existing noise-sensitive land uses in the project vicinity. **This is a less-than-significant impact.**

Permanent Noise from On-site Operational Noise

Based on the site plans¹, rooftop HVAC equipment is not anticipated. On-site mechanical equipment will be housed on the ground floor of the building and would not be anticipated to be audible outside the building structure. A portion of the ground floor storage on the north, south and west side of the building, will be equipped with roll-up doors. The nearest sensitive receptors (residences) would be located 50 feet south of the roll-up doors. With a worst-case assumption that a motorized roll-up door generates noise level of 70 dBA at 3 feet, the closest residences would be exposed to up to 46 dBA L_{max}. It is anticipated that use of the door mechanisms would be infrequent, resulting in substantially lower levels on an hourly or daily average basis. Noise levels generated by the door mechanisms would be below those generated by existing noise sources, would not substantially contribute to the noise environment, and would result in noise levels that are significantly below the exterior threshold of 60 dBA for residential use areas. This is a **less-than-significant** impact.

Permanent Noise Increases from Project Traffic

A permanent increase in the day-night average noise level of 3 dBA CNEL or greater at noise-sensitive receptors would be considered significant when projected noise levels would exceed those considered satisfactory for the affected land use. An increase of 5 dBA CNEL or greater would be considered significant when projected noise levels would continue to meet those considered satisfactory for the affected land use. The City of Campbell defines a noise level of 60 dBA CNEL or less to be normally acceptable for residential land uses and 70 dBA CNEL or less to be normally acceptable for commercial land uses. For reference, a doubling in traffic volumes would result in a noise level increase of 3 dBA.

Based on project trip generation estimates, the proposed project would generate approximately 207 trips over a 24-hour period, with approximately 23 trips occurring during the AM peak hour and 40 trips occurring during the PM peak hour. Vehicles would access the site from McGlincy Lane. A comparison with existing traffic noise levels generated along McGlincy Lane indicates that project traffic would result in traffic noise increases of less than 1 dBA at noise sensitive locations. This noise increase is below the 5 dBA CNEL and 3 dBA CNEL criteria and would not be anticipated to be perceptible or measurable. This is a **less-than-significant** impact.

Temporary Noise Increases from Project Construction

The City of Campbell General Plan requires that all construction operations within the City to use best available noise suppression devices and techniques and to limit construction hours near residential uses per the Municipal Code allowable hours between 8 a.m. and 5 p.m. Monday

¹ Trojan Self-Storage, 680 and 700 E. McGlincy Lane, Campbell, CA, Jordan Architects, Inc.; dated November 12, 2018.

through Friday, and between 9 a.m. and 4 p.m. Saturday. The City of Campbell does not specify quantitative thresholds for the impact of temporary increases in noise due to construction. The threshold for speech interference indoors is 45 dBA. Assuming a 15 dB exterior-to-interior reduction for standard residential construction with windows open and a 25 dB exterior-to-interior reduction for standard commercial construction, assuming windows closed, this would correlate to an exterior threshold of 60 dBA L_{eq} at residential land uses and 70 dBA L_{eq} at commercial land uses. Therefore, the project would be considered to generate a significant temporary construction noise impact if project construction activities exceeded 60 dBA L_{eq} at nearby residences or exceeded 70 dBA L_{eq} at nearby commercial land uses and exceeded the ambient noise environment by 5 dBA L_{eq} or more for a period longer than one year.

Noise impacts resulting from construction depend upon the noise generated by various pieces of construction equipment, the timing and duration of noise-generating activities, and the distance between construction noise sources and noise-sensitive areas. Construction noise impacts primarily result when construction activities occur during noise-sensitive times of the day (e.g., early morning, evening, or nighttime hours), the construction occurs in areas immediately adjoining noise-sensitive land uses, or when construction lasts over extended periods of time.

Typical construction noise levels at a distance of 50 feet are shown in Tables 5 and 6. Table 5 shows the average noise level ranges, by construction phase and Table 6 shows the maximum noise level ranges for different construction equipment. Most demolition and construction noise falls within the range of 80 to 90 dBA at 50 feet from the source. Construction-generated noise levels drop off at a rate of about 6 dBA per doubling of the distance between the source and receptor. Shielding by buildings or terrain can provide an additional 5 to 10 dBA noise reduction at distant receptors.

TABLE 5 Typical Ranges of Construction Noise Levels at 50 Feet, L_{eq} (dBA)

	Domestic Housing		Office Building, Hotel, Hospital, School, Public Works		Industrial Parking Garage, Religious Amusement & Recreations, Store, Service Station		Public Works Roads & Highways, Sewers, and Trenches

Notes:

¹ Measured at 50 feet from the construction equipment, with a “slow” (1 sec.) time constant.² Noise limits apply to total noise emitted from equipment and associated components operating at full power while engaged in its intended operation.³ Portable Air Compressor rated at 75 cfm or greater and that operates at greater than 50 psi.

Construction activities would include demolition, site preparation, excavation, grading, trenching, building construction, paving, and architectural coating and is anticipated to occur over a period of 10 months. During each stage of construction, there would be a different mix of equipment operating, and noise levels would vary by stage and vary within stages, based on the amount of equipment in operation and the location at which the equipment is operating. The hauling of excavated materials and construction materials would generate truck trips on local roadways as well. Table 7 shows the anticipated project specific construction noise levels calculated using the Federal Highway Administration (FHWA) software - Roadway Construction Noise Model (RCNM).

TABLE 7 Calculated Construction Noise Levels for Each Phase of Construction

Construction Phase	At Distance of 50 ft.	
	L_{eq} , dBA	L_{max} , dBA
Demolition (20 days)	85	90
Site Preparation (10 days)	83	85
Grading/Excavation (30 days)	84	85
Trenching (10 days)	78	81
Building-Exterior (300 days)	78	81
Building-Interior (20 days)	74	78
Paving (20 days)	80	80

The closest residences to project construction are located about 50 feet from construction activity. As shown in Table 7, at 50 feet from the noise source maximum instantaneous noise levels generated by project construction equipment are calculated to range from 78 to 90 dBA L_{max} and hourly average noise levels are calculated to range from 74 to 85 dBA L_{eq} . Residential receptors to the south of the project, on Regas Drive, are exposed to existing daytime ambient noise levels in the range of 45 to 60 dBA L_{eq} (see ST-1 and ST-2) and commercial receptors, located 30 feet to the east of the project site, have existing daytime ambient noise levels in the range of 55 to 70 dBA L_{eq} (see LT-1). Noise levels at these receptors would be anticipated to exceed 60 dBA L_{eq} at residences and 70 dBA L_{eq} at commercial uses and the ambient by more than 5 dBA. However, construction will occur over a period of only 10 months, less than the 12-month long threshold used to identify significant impacts. With inclusion of the best management practices provided below, this is a **less-than-significant** impact.

Implementation of the *Best Construction Management Practices* below measures would reduce construction noise levels emanating from the site, limit construction hours, and minimize disruption and annoyance.

- In accordance with the Campbell Municipal Code, construction activities shall be limited to the hours between 8:00 a.m. and 5:00 p.m., Monday through Friday, and between 9:00 a.m. to 4:00 p.m. on Saturdays, with no construction occurring on Sundays or Holidays.
- Equip all internal combustion engine-driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment.
- Unnecessary idling of internal combustion engines should be strictly prohibited.

- Locate stationary noise-generating equipment, such as air compressors or portable power generators, as far as possible from sensitive receptors as feasible.
- Utilize "quiet" air compressors and other stationary noise sources where technology exists.
- Construction staging areas shall be established at locations that will create the greatest distance between the construction-related noise sources and noise-sensitive receptors nearest the project site during all project construction.
- Control noise from construction workers' radios to a point where they are not audible at existing residences bordering the project site.
- The contractor shall prepare a detailed construction plan identifying the schedule for major noise-generating construction activities and notify in writing all adjacent business, residences, and other noise-sensitive land uses of the construction schedule. The construction plan shall identify a procedure for coordination with adjacent residential land uses so that construction activities can be scheduled to minimize noise disturbance.
- Designate a "disturbance coordinator" who would be responsible for responding to any complaints about construction noise. The disturbance coordinator will determine the cause of the noise complaint (e.g., bad muffler, etc.) and will require that reasonable measures be implemented to correct the problem. Conspicuously post a telephone number for the disturbance coordinator at the construction site and include in it the notice sent to neighbors regarding the construction schedule.

With implementation of the standard best management practices, this impact is **less-than-significant**.

Mitigation Measure 1: None required.

Impact 2: Generation of Excessive Groundborne Vibration due to Construction. Existing structures adjoining the project site would not be exposed to excessive vibration from project construction. **This is a less-than-significant impact.**

For structural damage, the California Department of Transportation recommends a vibration limit of 0.5 in/sec PPV for buildings structurally sound and designed to modern engineering standards, 0.3 in/sec PPV for buildings that are found to be structurally sound but where structural damage is a major concern, and a conservative limit of 0.08 in/sec PPV for ancient buildings or buildings that are documented to be structurally weakened (see Table 3). The 0.3 in/sec PPV vibration limit would be applicable to properties in the vicinity of the project site.

The construction of the project may generate perceptible vibration when heavy equipment or impact tools (e.g. jackhammers, hoe rams) are used. Construction activities would include demolition, site preparation, excavation, grading, trenching, building construction, paving, and architectural coating. Project construction equipment to be used on the project is anticipated to

include concrete saws, excavators, graders, dozers, backhoes, forklifts, cement mixers, aerial lifts, cranes, welders, generators, pavers, paving equipment, rollers, and pick-up trucks. Pile driving, a typically high vibration generating activity, is not anticipated during the project. Table 8 presents typical vibration levels that could be expected from construction equipment at a distance of 25 feet.

TABLE 8 Vibration Source Levels for Construction Equipment

Equipment		PPV at 25 ft. (in/sec)
Clam shovel drop		0.202
Hydromill (slurry wall)	in soil	0.008
	in rock	0.017
Vibratory Roller		0.210
Hoe Ram		0.089
Large bulldozer		0.089
Caisson drilling		0.089
Loaded trucks		0.076
Jackhammer		0.035
Small bulldozer		0.003

Source: Transit Noise and Vibration Impact Assessment, United States Department of Transportation, Office of Planning and Environment, Federal Transit Administration, September 2018.

Vibration levels would vary depending on soil conditions, construction methods, and equipment used. Construction activities, such as drilling, the use of jackhammers, rock drills and other high-power or vibratory tools, and rolling stock equipment (tracked vehicles, compactors, etc.) may generate substantial vibration in the immediate vicinity. The nearest structures are located approximately 25 feet south of the shared property line. At 25 feet, construction vibration is anticipated to range from about 0.21 in/sec PPV during use of a vibratory roller to 0.003 in/sec PPV during use of smaller construction vehicles circulating the site. These vibration levels may be perceptible to occupants, but would be below the 0.3 in/sec PPV vibration limit and would not be anticipated to cause architectural or structural damage. As construction moves away from the shared property lines, vibration levels would be even lower. This is a **less-than-significant** impact.

Mitigation Measure 2: None required.

CEQA Initial Study Checklist Questions

The California Environmental Quality Act (CEQA) includes qualitative guidelines for determining the significance of environmental noise impacts. The CEQA Initial Study Checklist questions are listed below:

- a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?

*Mechanical equipment will be housed on the ground floor of the building and would not be anticipated to be audible outside the building structure. Maximum noise levels generated by mechanical roll-up door mechanisms would result in noise levels below those generated by existing noise sources and would not substantially contribute to the noise environment. **Less-than-Significant Impact.***

*Project traffic would result in traffic noise increases of less than 1 dBA at noise sensitive locations. This noise increase would be below the 5 dBA CNEL and 3 dBA CNEL criteria and would not be anticipated to be perceptible or measurable. **Less-than-Significant Impact.***

*Construction would be conducted within allowable hours and would occur over a period of less than one-year. With implementation of standard best management practices this would be a **Less-than-Significant Impact.***

- b) Generation of excessive groundborne vibration or groundborne noise levels?

*Project construction is anticipated to result in groundborne vibration levels of 0.021 to 0.003 in/sec PPV at the nearest structures when construction is located adjacent to shared property lines. These vibration levels would be below the 0.3 in/sec PPV vibration limit and would not be anticipated to cause architectural or structural damage. As construction moves away from the shared property lines, vibration levels would be even lower. **Less-than-Significant Impact.***

- c) For a project located within the vicinity of a private airport or airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?

*The project site is not located in the vicinity of an existing airport or airport land use zone and would not expose people residing or working in the project area to excessive aircraft noise levels. **No Impact.***
