1630 W. Campbell Avenue
Conditional Use Permit (PLN-2021-90) – Wireless Rooftop (Cupola) Facility

Environmental Finding(s) (CMC Sec. 21.38.050):

19. The project is Categorically Exempt under Section 15301 (Class 1) of the California Environmental Quality Act (CEQA), pertaining to the operation and leasing, and minor alteration of an existing private structure.

20. No substantial evidence has been presented which shows that the project, as currently presented and subject to the required conditions of approval, will have a significant adverse impact on the environment.

THEREFORE, BE IT RESOLVED that the Planning Commission grants approval of a Conditional Use Permit with Site and Architectural Review (PLN-2021-90) to allow the establishment of a new concealed wireless facility (rooftop cupola) on property located at 1630 W. Campbell Avenue subject to the attached Conditions of Approval (attached **Exhibit A**).

PASSED AND ADOPTED this 26th day of October, 2021, by the following roll call vote:

RESOLUTION NO. 4626

BEING A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF CAMPBELL GRANTING APPROVAL OF A CONDITIONAL USE PERMIT WITH SITE AND ARCHITECTURAL REVIEW (PLN-2021-90) TO ALLOW THE ESTABLISHMENT OF A NEW CONCEALED WIRELESS FACILITY (ROOFTOP CUPOLA) ON PROPERTY LOCATED AT 1630 W. CAMPBELL AVENUE IN THE C-1 (NEIGHBORHOOD COMMERCIAL) ZONING DISTRICT.

After notification and public hearing, as specified by law and after presentation by the Community Development Director, proponents and opponents, the hearing was closed.

The Planning Commission did find as follows with regard to application PLN-2021-90:

- The project site is zoned C-1 (Neighborhood Commercial) and designated *Neighborhood Commercial* by the General Plan.
- The project site is located within the 12-acre Kirkwood Plaza Shopping Center.
- The proposed cupola is located at the southwest corner of the largest building onsite, between Nob Hill Foods and Forthright Oyster Kitchen.
- The applicant is requesting approval of a Conditional Use Permit with Site and Architectural Review to allow for the removal and replacement of an existing rooftop cupola to facilitate the installation of a new concealed (rooftop) wireless communications facility. The scope of work also involves extending the height of an existing rooftop mechanical equipment screen and installing a new access ladder on the south side of the building.
- The cupola is proposed to be 45-feet, 3-inches tall, or 10-feet, 3-inches taller than the maximum height allowed by the C-1 (Neighborhood Commercial) zoning district (i.e., 35-feet).
- As the roof structure (i.e., cupola) would not serve to provide 'additional floor space', and the antennas support the operation of the onsite buildings (point of sale, music, and security systems often rely on or are supported by wireless connections), the proposed roof structure may be considered to house 'similar equipment' to those examples listed under CMC 21.18.050 and thereby warrant a height exception.
- Although the project includes development plans, it does not require a separate architectural review permit application but is subject to site and architectural review in accordance with CMC 21.45.050.
- Applicable General Plan Policies considered by the Planning Commission included, but were not limited to, the following:

Policy LUT-9-31: Neighborhood Integrity: Minimize the visual impact of wireless telecommunication facilities by designing them as an integral architectural feature to a structure.

CONDITIONS OF APPROVAL
Conditional Use Permit (PLN-2021-90)

Where approval by the Director of Community Development, City Engineer, Public Works Director, City Attorney or Fire Department is required, that review shall be for compliance with all applicable conditions of approval, adopted policies and guidelines, ordinances, laws and regulations and accepted engineering practices for the item under review. Additionally, the applicant is hereby notified that he/she is required to comply with all applicable Codes or Ordinances of the City of Campbell and the State of California that pertain to this development and are not herein specified.

COMMUNITY DEVELOPMENT DEPARTMENT
PLANNING DIVISION

- Approved Project: Approval is granted for a Conditional Use Permit with Site and Architectural Review (PLN-2021-90) to allow the establishment of a new concealed wireless facility (rooftop cupola) on property located at **1630 W. Campbell Avenue**. The project shall substantially conform to the Project Plans included as Attachment 2 and Photosimulation included as Attachment 3 in the October 26, 2021 Planning Commission Staff Report, except as may be modified by the Conditions of Approval contained herein.
- Permit Approval Expiration: The Conditional Use Permit with Site and Architectural Review (PLN-2021-90) shall be valid for one year from the date of final approval (expiring November 5, 2022). Within this one-year period, an application for the Building Permit must be submitted. Failure to meet this deadline or expiration of the Building Permit plan check or issued Building Permit will result in the Conditional Use Permit with Site and Architectural Review being rendered void.
- Plan Revisions: Upon prior approval by the Community Development Director, all Minor Modifications to the approved project plans shall be included in the construction drawings submitted for Building Permit. Any modifications to the Building plan set during construction shall require submittal of a Building Permit Revision and approval by the Building Official prior to Final Inspection. Further, prior to building permit submittal, the following revisions to the plans shall be incorporated to the satisfaction of the Community Development Director:
 - Paint Color: The cupola shall be painted a 'brick red' color as to match the existing building below.
 - Metal Roof: The standing seam metal roof shall be redesigned to include a hipped roof element like that of adjacent buildings onsite.
 - Medallions & Banding: The existing ledgestone medallions and banding shall be removed and replaced higher on the cupola.

Policy LUT-13.1: Variety of Uses: Attract and maintain a variety of uses that create an economic balance within the City while maintaining a balance with other community land use needs, such as housing and open space, and while providing high quality services to the community.

- No substantial evidence has been presented which shows that the project, as currently presented and subject to the required conditions of approval, will have a significant adverse impact on the environment.

Based upon the foregoing findings of fact, the Planning Commission further finds and concludes that:

- The proposed site is adequately served by streets of sufficient capacity to carry the kind and quantity of traffic the use would be expected to generate;
- The design, location, size, and operating characteristics of the proposed use are compatible with the existing and future land uses on-site and in the vicinity of the subject property;
- The establishment, maintenance, or operation of the proposed use at the location proposed will not be detrimental to the comfort, health, morals, peace, safety, or general welfare of persons residing or working in the neighborhood of the proposed use, or be detrimental or injurious to property and improvements in the neighborhood or to the general welfare of the city;

Site and Architectural Review Permit Findings (CMC Sec. 21.42.060.B):

- The project will be consistent with the General Plan;
- The project will aid in the harmonious development of the immediate area;
- The project is consistent with applicable adopted design guidelines, development agreement, overlay district, area plan, neighborhood plan, and specific plan(s).

	Lead Compounds: May cause eye irritation.
Effects of Overexposure:	Acute: Sulfuric Acid, Severe skin irritation, damage to cornea, respiratory irritation. Lead Compounds: Symptoms of toxicity include headache, tremor, dizziness, abdominal pain, muscle aches and weakness, drowsiness and irritability.
Effects of Overexposure - Chronic:	Sulfuric Acid: Possible exposure of both external inflammation of nose, throat and bronchial walls. Lead Compounds: Acute neurotoxicity, particularly of the motor neuron, with wrist drop, kidney damage; reproductive changes in males and females. Reported exposure to lead and lead compounds in the workplace may result in nervous system injury. Some toxicologic report abnormal chromosomal alterations in persons with blood lead levels of 50mg/100 ml or higher. Heavy lead exposure may result in central nervous system damage, encephalopathy and damage to the blood stream (hematopoietic tissues).
Chemical Stability:	Sulfuric Acid: The International Agency for Research on Cancer (IARC) has classified "strong inorganic acid not containing sulfate" as a Group 1 carcinogen, a substance that is carcinogenic to humans. This classification does not apply to liquid forms of sulfuric acid or sulfate acid compounds containing sulfuric acid, inorganic acid or sulfate acid (most) is not generated under normal use of this product. Misuse of the product, such as overcharging, may result in the generation of sulfuric acid or sulfate. Lead Compounds: Lead is on Group 2B carcinogen. Body is accumulative. <i>For the purpose of hazard classification under GHS/29 1910 1200 Appendix 3, this is approximately equivalent to GHS Category 1B. Proof of carcinogenicity to humans is lacking at present.</i>
Medical Condition (GHS) - Approved by a Physician:	Exposure to sulfuric acid must avoid large damage and aggressive pulmonary conditions. Contact of sulfuric acid with skin may aggravate disease such as eczema and contact dermatitis. Lead and its compounds can aggravate some forms of kidney, liver and neurologic diseases.
Acute Toxicity:	LD50 (oral): 1.250g/kg Inhalation: 1250g Inhalation: LC50 (rat) = 375 mg/m3; LC50 (guinea pig) 310 mg/m3 Elemental Lead, Acid: Toxicity Profile Estimate = 4500 mg/kg (based on lead bullion)
Oral LD50:	Elemental Lead: rat ~2140 mg/kg Acid: Sulfuric Acid: Toxicity Estimate (ATE) = 500 mg/kg body weight (based on lead bullion)
Additional Hazard Data:	All heavy metals, including the hazardous ingredients in this product, are taken into the body primarily by inhalation and ingestion. Most absorption problems are avoided by adequate precautions such as ventilation and respiratory protection covered in Section 8. Follow good personal hygiene to avoid inhalation and ingestion; wash hands, face, neck and arms thoroughly before eating, smoking or leaving the work area; use contaminated clothing and shoes only in work area; do not eat, drink, or use tobacco in work area. Restrict the use and presence of food, tobacco and cosmetics to non-contaminated area. Work clothes and work equipment used in contaminated areas must remain in designated area and never taken home or handled with personal non-contaminated clothing. This product is intended for industrial use only and should be isolated from children and their environment.
100% Hazardous:	The 100% Hazardous (or GHS Directive 67/548/EEC) classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase: H 361 May cause harm to the unborn child; avoid lead compounds, especially white forms.
ENVIRONMENTAL INFORMATION	Environmental Level: Lead is very persistent in soil and sediments. No data on environmental degradation. Mobility of metallic lead between ecological compartments is slow. Bioaccumulation of lead in ocean is weak and terrestrial animals and plants in little bioaccumulation occur through the food chain.
Environmental Toxicity - Aquatic Toxicity:	Sulfuric Acid: including lead compounds and elemental lead
Lead:	24 hr LC50, freshwater fish (Daphnia magna): 82 mg/L 96 hr LC50, freshwater fish (Cyprinus carpio): 22 mg/L 48 hr LC50 (mollusc for aquatic invertebrates) <1 mg/L, based on lead bullion
Additional Information:	No known effect on aquatic species depletion. Volatile organic compounds (VOCs): Volatile Water Endangering Class (WAC): NA
ENVIRONMENTAL CONSIDERATIONS/SHOULD BE MANAGED:	Spill/Leakage: Spill to secondary leak chamber for recycling. ISE INCORPORATED CONDUCTED AN ON-SITE NON INVASIVE INSPECTION OF THE EXISTING CONSTRUCTION, BASIC EXTERIOR DIMENSIONS AND GENERAL ARRANGEMENT OF EXISTING BUILDING CUPOLA. DIMENSIONS USED FOR DESIGN WERE TAKEN FROM THE FOLLOWING DOCUMENTS: DOCUMENTS PROVIDED BY M SQUARED WIRELESS DATED 12/07/2021 AS 90% DC'S AS WELL AS THE KIRKWOOD PLAZA SHOPPING CENTER EXPANSION AND RENOVATION DRAWINGS (04-20-90) ALONG WITH THE BUILDING DRAWINGS PROVIDED IN PART DATED 03-07-90 BY HAGMAN ASSOCIATES ARCHITECTS.

ISE INCORPORATED AND **VALMONT** ASSUME NO LIABILITY FOR AS BUILT GEOMETRY THAT DOES NOT MATCH THOSE PROVIDED IN THESE DOCUMENTS. THE DESIGN HEREIN IS INTENDED FOR "STICK BUILT" CONSTRUCTION USING MEMBERS AND CONFIGURATION AS SHOWN IN THESE DRAWINGS. IT SHOULD BE EXPECTED THAT ACTUAL FIELD DIMENSIONS WILL VARY FROM THOSE SHOWN IN THESE DRAWINGS. A CONTRACTOR FAMILULAR WITH THIS TYPE OF CONSTRUCTION IS RECOMMENDED.

PROCEDURE FOR MAKING STRUCTURAL EPOXY JOINTS

ADHESIVE: WELD-ON 45 OR 3M 540
PER MANUFACTURE SPECIFICATIONS & RECOMMENDATIONS.

Surface Preparation

- 1) Sand mating surfaces with 80 grit sandpaper until the surface gloss has been removed. The surfacing veil must be ground off to expose the glass reinforcement. Sand blasting equipment can also be used.
- 2) Remove all dust with a clean cloth; air blasting equipment may also be used. Avoid recontamination of the surface from handling. Mixing of Epoxy Mix equal volume portions of the base and hardener in a small wax coated paper cup with a clean stick until a uniform gray color is attained and all marbled appearance is gone.

NOTE:

Other adhesive systems compatible with fiberglass can be utilized and the manufacturer's mixing instructions for these systems should be followed.

Application and Cure

- 1) Apply the mixed epoxy uniformly to all surfaces to be joined. A thin application is often more beneficial than a thick application.
- 2) Avoid introducing moisture into the joint.
- 3) Join the surfaces to be bonded. The pot life at 77°F for a 3 oz. mixture of equal volumes of base and hardener is 2.5 hours.
- 4) Secure the joint with clamps (or rivets or bolts) and allow 24 hours for a full cure. The assembly can often be handled with reasonable care in less than 8 hours. The structure should not be required to support its design load until at least 48 hours (at 70°F) after bonding. Lower temperatures require a longer cure.
- 5) After securing the joint, wipe away excess epoxy.
